Windshields & LED Headlamps

A. QUICK-RELEASE SUPER SPORT WINDSHIELD

Reduces the pounding of wind and shower of bugs but keeps the wind-in-the-hair feeling. Ideal for a cool morning ride, the sleek profile of the Super Sport Windshield hugs the front headlamp for a sporty look. The windshield mounts to the fork tubes with elegant die-cast lever locking clamps, so the windshield does not require any "leave-behind" docking hardware. You get quick on-and-off convenience and a clean, custom look. No tools are required and the kit includes everything needed to install the windshield.

57400192	Light Smoke.	**$319.95**

Fits '15-later XG™ models (except XG750A). Installation requires removal of Original Equipment headlamp visor. Models equipped with a front mounted license plate require separate purchase of License Plate Bracket P/N 67900227. Windshield dimensions: Overall height 25.0"; width – 20.1".

B. DAYMAKER® LED HEADLAMPS

Cut through the night. Harley-Davidson® LED Lamps are brighter and whiter in color and provide a superior light pattern over standard incandescent lamps. Compared to the yellow light of a traditional halogen bulb, the LED lamp produces a "Daylight Color Impression" that appears more natural to the user. Headlamps feature horizontal "D-shaped" lenses that focus light into a pool in front of the motorcycle and separate high beam and low beam projector lenses that provide a focused beam of light ahead. Lamps are available in your choice of brilliant chrome or gloss black background to match your styling direction. The solid-state LEDs are designed for long life and the shock- and vibration-resistant lamp assembly mounts into existing light housings. Installation is quick and easy and the plug-in lamps connect to the factory headlamp wiring. The LED lamps are DOT and ECE compliant.

Fits '15-later XG models.

C. CAFÉ SOLO SEAT

C. CAFÉ SOLO SEAT

There's something about the placement of the rider that makes the Cafe Solo Seat special. The one-up design and the high back pad hold the rider in place and provide a direct connection to the bike. You sit "in" the bike and your hands and feet reach naturally to the controls. The low-slung pad, narrow nose and the tapered tail enhance the bike's sporting profile and pay homage to the heritage of the iconic Café Racer style.

52000168 **$219.95**
Fits '15-later XG models (except XG750A). Seat width 11.25".

D. REACH® SEAT

Designed specifically for riders requiring a close-to-the-bar riding position, this Reach® Seat is shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The seat moves the rider approximately 1.5" lower and 1.25" forward and the 1.25"-slimmer front profile brings the legs closer together for an easier reach to the ground at a stop. The Reach Seat features a stepped profile that keeps the rider from sliding back during acceleration.

52000123 **$214.95**
Fits '15-later XG models (except XG750A). Seat width 10.25"; passenger pillion width 6.75".

E. TALLBOY® SEAT

The correct riding position can help a tall rider sit comfortably on the bike, and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider 1.25" up and 2.5" back from the stock seating position, a Tallboy Seat can eliminate the "knees-high" riding position and effectively places the body for a natural arm and leg reach to the controls.

52000124 **$214.95**
Fits '15-later XG models (except XG750A). Seat width 10.5"; passenger pillion width 7.5".

These minimalistic "living finish" components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, handcrafted look to your custom ride. These minimalistic "living finish" components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

CAFÉ CUSTOM

A café bike starts with a “less-is-more” philosophy. Low-slung bars, rear-set foot controls and a narrow profile define the style. And when stripped of all “unnecessary” accessories, these unburdened motorcycles are lighter, faster and have a harder-edged, rebellious look that reflects the rider’s bare-knuckle attitude.

This Iron 883™ model is caffeine fueled, fully wired and ready to carve up back roads. Equipped with a suite of Café Custom components and a Screamin’ Eagle® fully adjustable suspension, this aggressive riding profile puts you firmly in control.

1 CLIP-ON BARS

Low, narrow clip-on handlebars enable the rider to "tuck in," helping to reduce wind resistance and improve control.

2 BAR END MIRRORS

Bar End Mirrors provide a clean, streamlined look, and the outside-the-grip location eases the view past your hands and shoulders.

3 REAR SET CONTROLS

For the ultimate in aggressive riding posture, Rear Set Foot Controls reposition your feet to encourage a tank-hugging profile.

4 CAFÉ TAIL SECTION

This fast-back solo seat provides the perfect lay-down aggressive riding posture for splitting lanes or carving corners.

A. CAFÉ CUSTOM TAIL SECTION

Create your own link to the Sportster®-based racing and performance bikes of the '60s and '70s. This fast-back solo seat and tail section mirrors the look and feel of the iconic 1977-78 Harley-Davidson® XLCR Café Racer model, and re-imagines the style for the modern era. Ideal for use with Clip-On or Sportster Clubman Handlebars and mid- or rear-set foot controls, this seat provides the perfect lay-down aggressive riding posture for splitting lanes or carving corners. The seat's upturned tail and longer nose positions the solo rider closer to the tank for better weight balance, quicker steering and added front-end feedback. The Tail Section is a true bolt-on design that wraps the fender struts, so unlike other café bike kits, there is no cutting, welding or frame modification required. Installation is reversible – you can easily return your bike to the stock look. The complete kit features a sweeping composite tail section with a steel inner support, a deep solo bucket seat with backstop pad and all necessary installation hardware.

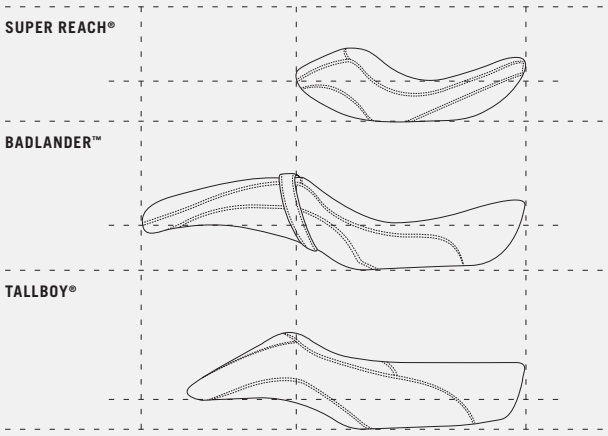
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Tallboy™ Handlebars.

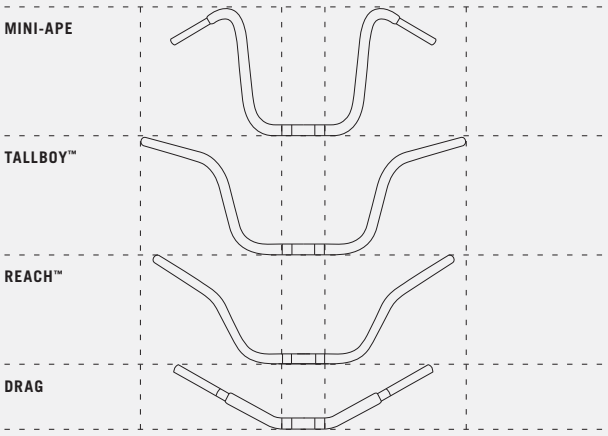
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

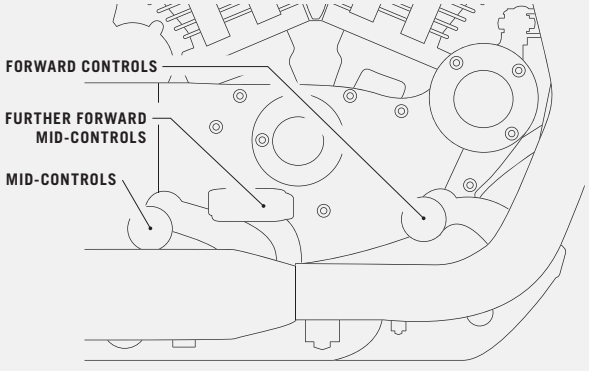
SEE PAGES 56-62



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

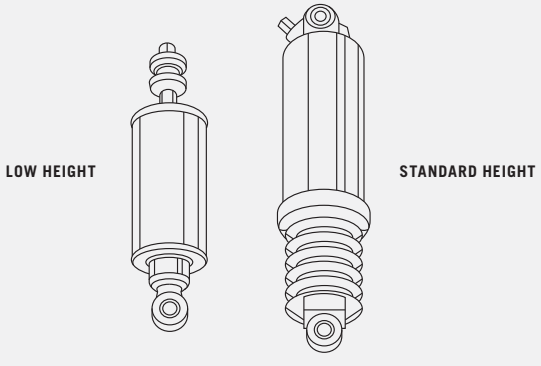
SEE PAGES 606-612



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 79-80



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

SEE PAGES 76-78

Seating – Reach® &Tallboy®

A. SUPER REACH® SOLO SEAT

Get a little bit closer. Super Reach® forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs closer together so that your feet rest firmly on the pavement. After hundreds of hours of on-road and ergonomic testing, the seat shape and foam density were selected as the ideal position for riders 5'-0" to 5'-4" tall. The Super Reach Seat moves the rider 1.5" closer to the controls compared to stock seat on XL883L model, and 2" closer and .5" lower compared to stock seat on XL1200C model. The nose is 1.0" narrower than the stock seat, and it is tastefully sculpted to look great with any size Sportster® fuel tank. The combination of premium textured and smooth vinyl surfaces and charcoal gray stitching and embroidered Bar & Shield logo really set the seat apart. For the ultimate solo touring setup, add the Quick Release Rider Backrest P/N 52300245.

PREMIUM ADJUSTABLE SUSPENSION

Your motorcycle's suspension defines the riding experience. Fast starts, smooth stops and tight control in the corners are all part of the vehicle dynamics controlled by the tuning of the front forks and rear shocks. Screamin' Eagle® Fully Adjustable Suspension components let you dial-in the ride, whether you're cruising the highway, carving up a country road or dodging city potholes.

1 COMPRESSION ADJUSTER

Fine-tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

2 REBOUND ADJUSTER

Fine-tunes the downward wheel movement after riding over bumps or potholes

Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag– the amount the suspension drops under the weight of the rider and cargo

4 PIGGYBACK RESERVOIR

Remote reservoir keeps the shock oil cooler to maintain damping performance

Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

C. PERFORMANCE SUSPENSION KIT – XR1200

Maximize the canyon-carving ability of your XR1200 motorcycle with this complete Performance Suspension Kit. Fully adjustable light-weight suspension system features a new Showa® Big Piston Front fork (BPF) design. The BPF eliminates many of the internal components used in a cartridge-type fork, simplifying construction and resulting in lighter overall fork weight. The large-diameter of the BPF's internal piston allows a reduction in damping pressure, for better feedback and smoother action. This performance suspension kit also provides a very controlled feeling, which leads to more rider confidence. The BPF's rebound and compression damping force settings are easily fine-tuned via two adjuster screws located on top of the fork bolts. The spring pre-load is adjusted via a M5 hex screw on the axle holders. The rear Showa® shocks feature 36mm pistons with piggyback nitrogen-charged reservoirs. The compression damping can be adjusted via a knob on top of the piggyback reservoir. The rebound is adjusted with a thumb wheel on the lower clevis. Rear spring pre-load is also adjustable on the shock for optimum 1G sag. The kit includes one set of Big Piston Front Forks and one set of rear shocks.

54530-10 **$1,499.95**

Fits '08-'13 XR1200 models. Stock on '10-'13 XR1200X models. Does not fit with Sport Saddlebag Kit P/N 90328-08.

A. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT*

This Single-Sided Cartridge Fork provides improved handling performance by keeping the tire in contact with the road surface. Tuned to work in concert with the Premium Emulsion Rear Shocks, the fork damping is controlled by a specifically calibrated piston and valve stack. Unlike typical orifice damping, the piston/valve system helps the cartridge fork achieve a linear damping force curve for consistent feel throughout the compression and extension of the front suspension. The cartridge allows the forks to react quickly to rough roads, inspiring rider confidence in sweeping corners. The compression piston provides excellent low speed damping for a better rider feel, and the rebound spring provides a smoother feel during topping. The cartridge fork resists bottoming and dive, and the triple rate spring and oil lock allows the forks to absorb bumps even under hard braking – giving the rider more control while resisting wheel hop. A perfect addition during the installation of chrome or gloss black lower fork sliders, the kit includes fork pipe, cartridge, fork bolts, main springs and oil seals.

45400091 Standard Height. **$349.95**
Fits '04-'15 XL883, XL883C, XL883R, XL1200R, and XL1200V and '04-'10 XL1200C models.

45400090 Low-Profile. **$349.95**
Fits '11-'15 XL883, XL1200C and XL1200T and '06-'11 XL1200L models.

B. PREMIUM RIDE EMULSION SHOCKS*

Experience a comfortable and confidence-inspiring ride – no matter the pavement conditions – with Harley-Davidson® Premium Ride Emulsion Shocks. These fast shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. With the addition of urethane bumpers, you get a controlled ride and minimized bottoming harshness. The locking threaded adjustment lets you fine-tune the spring preload to your current riding conditions–whether a solo run on the back roads or a fully loaded two-up freeway tour. Kit includes left and right shock and preload adjustment spanner wrench.

54000076 Standard Height. **$599.95**

54704-07 **$234.95**
Fits '07-'15 XL883L, XL883N, XL1200N, XL1200V, XL1200X and '11-'15 XL1200C models.

****WARNING:** The Profile Low Front Spring Kit cannot be used independently and must be used with the appropriate Profile Rear Shock Lowering Kit. Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

F. REAR SET FOOT CONTROLS – SPORTSTER MODELS

SPORTSTER® FOOT CONTROLS
A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tailbone, and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Many Sportster® models can be equipped with the following foot control configurations:

MID CONTROLS:
Original Equipment on some models, Mid Controls position the feet below the knee for a sporting riding posture.

STANDARD FORWARD CONTROLS:
Places the legs for a "feet-in the-wind" laid-back profiling posture.

FURTHER FORWARD MID CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

D. STANDARD FORWARD CONTROL KIT*
Add the stretched-out look and extended riding position to your Sportster model. The complete kit includes all hardware necessary to convert your Sportster model from mid controls to forward controls. Available in your choice of finishes, these forward controls add style and long range comfort. (Footpegs and shifter peg not included.)

Fits '14-later XL models. Requires separate purchase of stock or accessory rider position footpegs with wear pegs that fit '14-later XL1200 models.

50700020	Chrome with Black Peg Bracket.	**$474.95**
50700021	Black.	**$449.95**

Fits '06-'13 XL models with mid-controls (except XL1200CP and XL1200CA). XL1200L requires separate purchase of footpegs P/N 33134-07CAZ and 33135-07CAZ.

33395-06A	Chrome.	**$474.95**
33397-07A	Black.	**$449.95**

E. FURTHER FORWARD MID CONTROL KIT
Feel a little cramped when your feet are placed on the standard-location mid controls? This kit repositions the controls 3.0" forward of the stock location, eliminating the "knees-high" riding attitude while maintaining a sporty upright riding posture. The forward location provides an open path for your feet to aid maneuvering the bike while parking and improves access to the jiffy stand for a shorter rider. Kit includes control mounts, brake and shift levers, brake rod, mini-footboards with wear pegs and all hardware necessary to convert your mid or forward control-equipped Sportster model.

50700028 Gloss Black. **$449.95**
Fits '14-later XL models.

F. REAR SET FOOT CONTROLS – SPORTSTER MODELS
Transform the on-street profile of your Sportster model. Moving the foot controls to a rear-mounted location takes the riding position from a relaxed cruiser to a solo, aggressive, curve-carving posture. When combined with a Clip-On or Clubman Handlebar, the resulting hands-forward and feet-back profile drapes the rider over the bike and makes you feel a part of the machine. This complete gloss black Rear Set Control Kit includes everything you need to move the brake and shift lever to the rear passenger position. This unique kit maintains the standard 1-down and 4-up shift pattern, and can be installed with the Original Equipment low staggered exhaust system. Kit reuses Original Equipment rider footpegs. Installation requires removal of passenger footpegs and footpeg mounts. For solo rider application only.

50700040 Gloss Black. **$724.95**
Fits '14-later XL883N, XL883L, XL1200CX, XL1200T, and XL1200X models and '18-later XL1200NS and XL1200XS models. Does not fit with Rail Collection Sprocket Cover P/N 34800032. For use with solo seat application only. Installation of Rear Set Controls requires removal of passenger foot pegs, therefore removal of the Original Equipment two-up seat and installation of a solo-only seat is required. See your Dealer for solo seat options.

***WARNING:** Installation of accessory Forward Control Kits may affect cornering clearance. This could distract the rider, causing loss of control, resulting in death or serious injury.

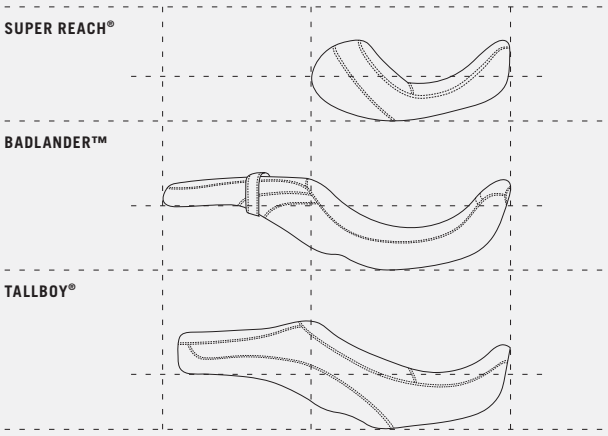
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

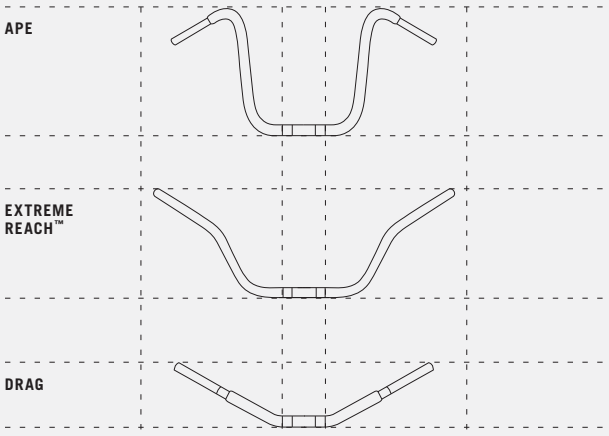
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

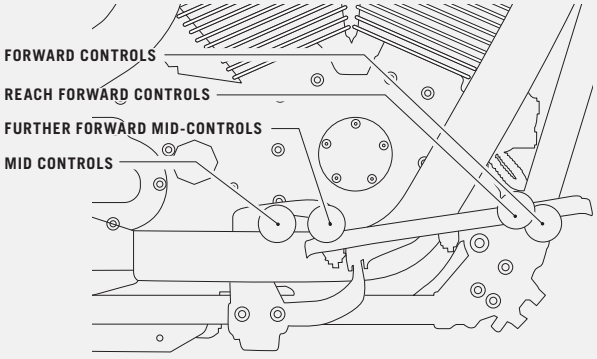
SEE PAGES 101-105



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

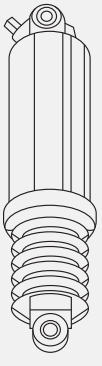
SEE PAGES 604-606



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 117-121



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

A. PREMIUM RIDE SINGLE CARTRIDGE FORK KIT*

This Single-Sided Cartridge Fork provides improved handling performance by keeping the tire in contact with the road surface. Tuned to work in concert with the Premium Emulsion Rear Shocks, the fork damping is controlled by a specifically calibrated piston and valve stack. Unlike typical orifice damping, the piston/valve system helps the cartridge fork achieve a linear damping force curve for consistent feel throughout the compression and extension of the front suspension. The cartridge allows the forks to react quickly to rough roads, inspiring rider confidence in sweeping corners. The compression piston provides excellent low-speed damping for a better rider feel, and the rebound spring provides a smoother feel during topping. The cartridge fork resists bottoming and dive, and the triple rate spring and oil lock allows the forks to absorb bumps even under hard braking – giving the rider more control while resisting wheel hop. A perfect addition during the installation of chrome or gloss black lower fork sliders, the kit includes fork pipe, cartridge, fork bolts, main springs and oil seals.

45400058 **$349.95**
Fits '06-'17 Dyna® models (except FLD, FXDWG and '07-'08 FXDSE). Original Equipment on FXDLS models.

B. PREMIUM RIDE EMULSION SHOCKS*

Experience a comfortable and confidence-inspiring ride – no matter the pavement conditions – with Harley-Davidson® Premium Ride Emulsion Shocks. These fast-acting monotube nitrogen gas-charged shocks offer enhanced compression and rebound damping control when compared to typical twin-tube shock absorbers. The nitrogen gas charged shocks resist oil aeration and work with the internal valve stack to provide superior damping control in the twisties. The large 36mm pistons and low viscosity high-performance oil allow these shocks to react quickly to impacts and keep the tires tracking the road surface. You get a controlled ride and minimized bottoming harshness transmitted through the frame. The locking threaded adjustment lets you fine-tune the spring preload to your current riding conditions – whether a solo run on the back roads or a fully loaded two-up freeway tour – and urethane bumpers provide a softer feel if the shock bottoms under load. The beautifully finished shocks feature black-anodized billet top caps and black progressively-wound springs. Kit includes left and right shock and preload adjustment spanner wrench.

54000066 Stock Height. **$599.95**
Fits '06-'17 Dyna models (except FLD and '07-'08 FXDSE). Original Equipment on FXDLS models.

***WARNING:** Installation of any accessory suspension components may affect cornering clearance and jiffy stand operation. This could distract the rider, causing loss of control and death or serious injury.

FOOT CONTROL POSITION COMPARISON

STANDARD FORWARD CONTROLS

REDUCED REACH FORWARD CONTROLS

FURTHER FORWARD MID-CONTROLS

DYNA® FOOT CONTROL*
A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tailbone and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Dyna® models can be equipped with the following foot control configurations:

MID-CONTROLS:
Positions the feet below the knee for a sporting riding posture.

FURTHER FORWARD MID-CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

REDUCED REACH FORWARD CONTROLS:
Provides a foot-forward boulevard style without straining to reach the controls.

STANDARD FORWARD CONTROLS:
Stretches the legs for a "feet-in the-wind" laid back profiling posture.

FLOORBOARDS:
Supports the entire foot and places the rider in a comfortable upright position.

***WARNING:** Installation of accessory Forward Control Kits may affect cornering clearance. This could distract the rider, causing loss of control, resulting in death or serious injury.

Notice: The prices appearing in this catalog are the manufacturer's suggested retail prices. Actual retail prices may vary.

Want to stretch the riding position of your mid control-equipped model, but not comfortable with the long reach to factory-position forward controls? This complete kit is the perfect alternative. It positions the feet up and forward 10.0" from the mid control position, but 1.0" closer to the rider than the standard position factory forward controls, placing the rider's boot at a comfortable pivot point for improved support and leverage. Available in chrome or gloss black finish, the kit includes left and right footpeg supports, brake and shift lever assemblies, brake and shift linkages and all required hardware.

Fits '06-'17 Dyna models equipped with mid-controls. FLD models require separate purchase of footpegs.

C. REACH FORWARD CONTROL CONVERSION KIT*
Love the look and riding position you get with forward controls but not comfortable with the long stretch forward? This Forward Control Conversion Kit repositions the Original Equipment footpegs and foot controls up and back by over 1.0", positioning the controls closer to the rider for added comfort and confidence. The reduced reach places the rider's boot at the proper pivot point for improved leverage, while maintaining the "foot-forward" riding profile. This easy-to-install Conversion Kit includes heavy-duty steel mounts and shortened brake rod. Kit reuses Original Equipment control supports and brake and shift levers or can be personalized with your choice of custom lever styles.

50700005 **$199.95**

D. FURTHER FORWARD MID-CONTROL KIT*
Feel a little cramped when your feet are placed on the standard-location mid controls? This kit repositions the controls 2.0" forward of the stock location, eliminating the "knees-high" riding attitude while maintaining a sporty upright riding posture. The forward location provides an open path for your feet to aid maneuvering the bike while parking and improves access to the jiffy stand for a shorter rider. Kit includes chrome left and right footrest brackets, highly polished brake lever and chrome shift lever. Use stock footpegs, brake and shift linkages or choose from other Dyna collection offerings to complete your look.

50500386 **$349.95**

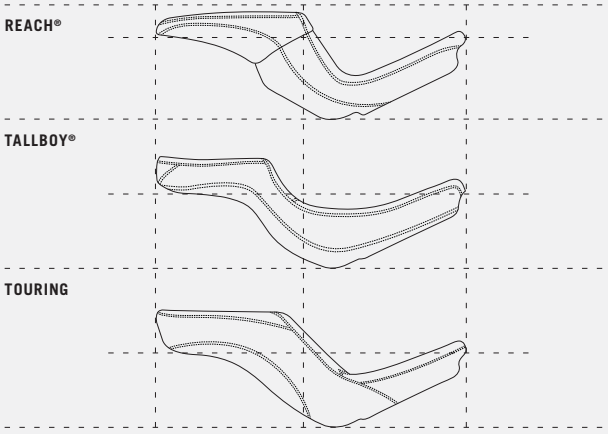
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid-Foot Controls, and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

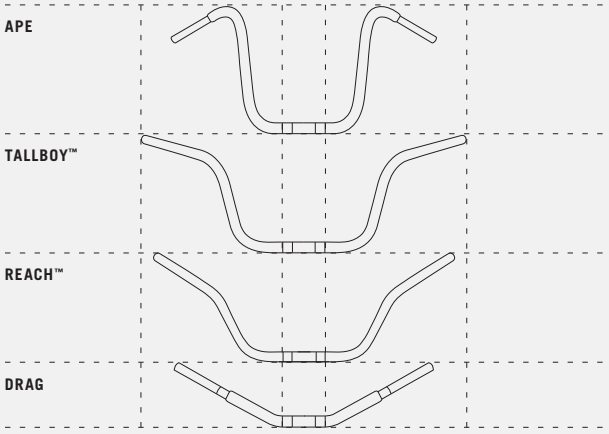
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

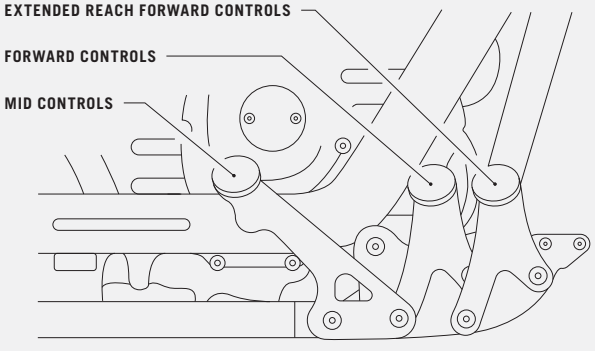
SEE PAGES 161-171



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

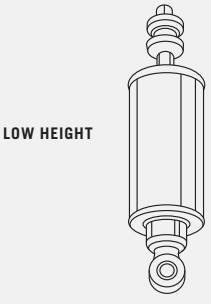
SEE PAGES 604-614



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 187-189



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

You make zero compromises when it comes to style so you're not about to trade looks for comfort. And why should you? Now you can have the best of both worlds and no one needs to know. The Bevel Seats were created with all the attitude to suit your styling direction while providing all the function without the bulky look of a comfort seat. The low, slim profile of the Bevel Seats complement the lines of your bike while the carbon fiber-like inserts, chevron-shaped pleating, HDMC embroidered script and edgy aluminum button detail, that your back end won't feel, add a custom look. What nobody sees but makes any ride better is the lightweight and breathable 3D mesh material. 3D mesh absorbs the impact of even the worst roads even though the material is significantly thinner than comparable seats. Taped seams provide water resistance to keep your back end dry even when the seat is wet and, the "bevel" at the back of the seat adds to the rider's lower back comfort.

A. BEVEL TWO-UP SEAT

You make zero compromises when it comes to style so you're not about to trade looks for comfort. And why should you? Now you can have the best of both worlds and no one needs to know. The Bevel Seats were created with all the attitude to suit your styling direction while providing all the function without the bulky look of a comfort seat. The low, slim profile of the Bevel Seats complement the lines of your bike while the carbon fiber-like inserts, chevron-shaped pleating, HDMC embroidered script and edgy aluminum, "no-feel" button detail, that your back end won't feel, add a custom look. What nobody sees but makes any ride better is the lightweight and breathable 3D mesh material. 3D mesh absorbs the impact of even the worst roads even though the material is significantly thinner than comparable seats. Taped seams provide water resistance to keep your back end dry even when the seat is wet and, the "bevel" at the back of the seat adds to the rider's lower back comfort.

C. WIND SPLITTER VENTED WINDSHIELD

D. KING-SIZE H-D DETACHABLES WINDSHIELD FOR HERITAGE SPRINGER MODELS – 18" CLEAR

C. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your sightline so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. ENJOY THE RIDE

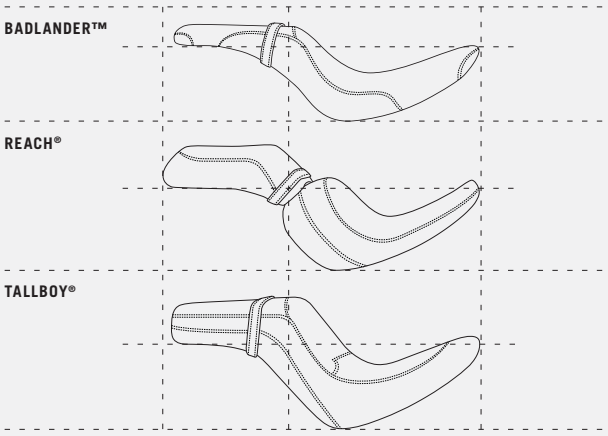
The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat.

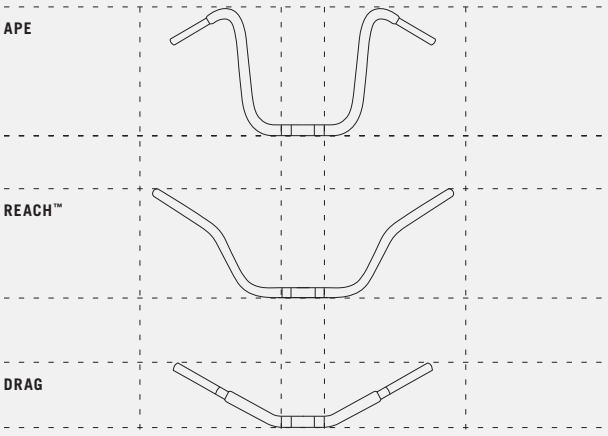
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

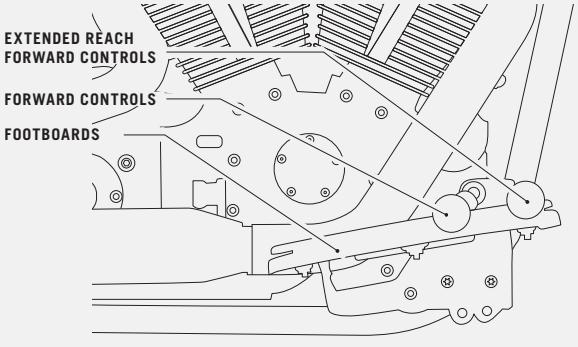
SEE PAGES 212-220



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

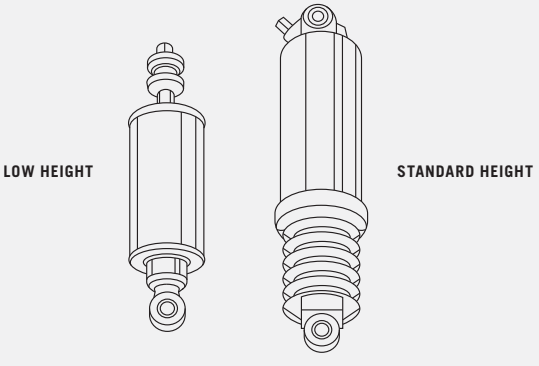
SEE PAGES 604-612



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 240-242



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

A. ROAD ZEPPELIN® SEAT PAD

Experience ultimate comfort. Designed to ensure hours of comfort in the saddle, Road Zeppelin® Seat Pads are equipped with a unique air bladder system that allows your weight to be supported evenly across the entire seating surface. Whether you have a low-profile seat or a larger more comfortable seat, you will feel the benefits. This air bladder system is designed to reduce pressure points, provide shock absorption and reduce vibration. Unlike other mouth-inflated seat pads, the Road Zeppelin Pad features an easy-to-reach integrated hand pump and metered air release valve that permits quick and controllable adjustment. You can easily adjust the comfort and support while seated on the pad. The UV-stable and snag-resistant mesh cover allows air to circulate beneath the rider's body, reducing the temperature trapped between the rider and seat. Shaped to conform to most Harley-Davidson® seats, the pads feature adjustable mounting straps and a non-skid surface to keep them in place. The hand-washable seat pad can be deflated and rolled for compact storage.

The low-profile design minimizes seat-height change compared to inflatable pads, while enhancing comfort with its shock-absorbing construction. Manufactured of UV-stable materials, these seat pads resist fading when exposed to the sun. Elastic under-seat strap and non-slip base provide secure installation and the available Circulator Passenger Pillion Pad attaches to the rider pad with hook-and-loop tabs.

A. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your sight line so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

A. COOLFLOW™ FAN

Keep your cool on a sweltering summer day. Engineered to maximize rider and passenger comfort in high temperature situations, the CoolFlow™ Fan is the perfect addition if your bike is subjected to parade duty, rush hour traffic or extreme temperature environments. Unlike traditional fan kits that try to cool the engine by blowing air across the cylinders and often onto your legs, the CoolFlow Fan Kit keeps the riders comfortable by pulling air away from the rear cylinder and exhaust pipe, and directing it toward the ground. The fan suction generates a low-pressure region near the riders to balance the natural "up and out" convection air flow in the area behind the engine. The wind-tunnel tested fan is tucked away above the transmission, and when combined with mid-frame air deflectors, significantly drops the temperature the seated rider experiences.

The CoolFlow Fan features switched On/Off/Auto operation on '17-later models and On/Off on '09-'16 models. In the "ON" mode, the fan is active at low speeds, and will turn off when the bike reaches 40mph. As speed drops, the fan turns back on at 35 mph. This logic program prevents the fan from cycling on and off during low speed changes. On '17-later models, the AUTO setting operates based on a combination of speed parameters and specific engine and ambient temperatures. Built to withstand the harsh motorcycle environment, the all-weather CoolFlow Fan is 100% waterproof and includes everything you need for installation. The plug-and-play design is integrated with the vehicle electronics, so "On/Off/Auto" fan operation is indicated in the odometer screen. Your dealer will enable this function in the Electronic Control Module (ECM) and you're ready to roll. Odometer fan status display feature availability varies by model and may not be available for your vehicle.

B. FAN ASSISTED OIL COOLER

Keep your cool. This easy-to-install Oil Cooler features a thermostatically controlled fan that provides continuous flow of cooling air – even while the bike is idling in traffic or moving at low speed. Ideal for bikes that see parade duty and other low speed or continuous idle situations, the Fan Assisted Oil Cooler is also the perfect addition to a bike modified with high-performance components. The fan automatically engages when the engine oil temperature rises, and when in operation, the Fan Assisted Oil Cooler can provide up to a 50-degree drop in oil temperature. And unlike other models, the Harley-Davidson® Fan Assisted Oil Cooler utilizes weather-rated fans and electronics that are designed for the harsh motorcycle environment. Engineered as a bolt-on replacement for the Original Equipment oil cooler, the Fan Assisted Oil Cooler is plug-and-play compatible with your bike's wiring harness. No splicing or rewiring is required. ECM reprogramming by a Harley-Davidson Dealer is required to complete the installation.

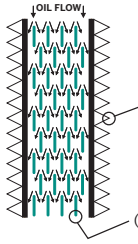
C. PREMIUM OIL COOLER KITS – TOURING

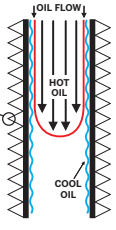
This oil cooler was designed specifically for Harley-Davidson to out-perform all other coolers in the industry. The cooler features a unique "Turbulator" system that evenly distributes oil across the cooling chambers. The air fins are designed to efficiently dissipate heat. The oil cooler has been designed to simplify installation and enhance performance. The large heat exchanger provides excellent cooling efficiency. The kit features a one-piece adapter plate with integrated thermostat that allows oil lines to connect to the oil filter bracket. Thermostat activates at 185°F (85°C). Kit comes complete with mounting hardware and precut oil lines.

Inside View of Premium Oil Cooler With Turbulators



Turbulators disperse and mix oil inside cooler to provide more efficient cooling capabilities. The cooler oil is not allowed to remain along the boundaries of the flow tube as in conventional coolers.

Inside View of Conventional Oil Cooler Without Turbulators



Coolers without the Turbulator system allow oil to flow only in a straight path. Oil does not mix and the cooler oil remains along the outer boundaries, while the hotter oil remains along the center path of flow. Without the mixing effects of the Turbulators, the conventional oil cooler provides less efficient cooling capabilities.

COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs — he or she has a stake in this ride as well.

THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.

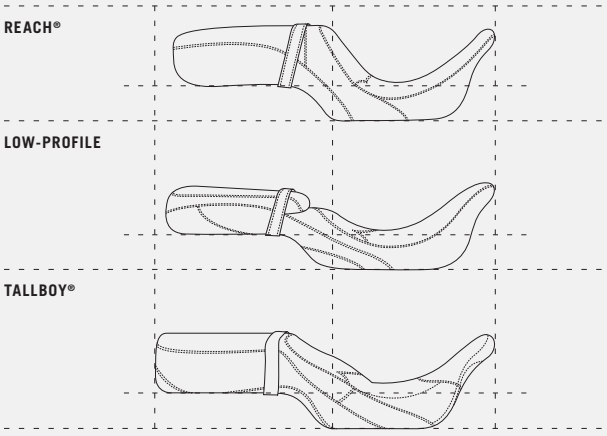
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Standard Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

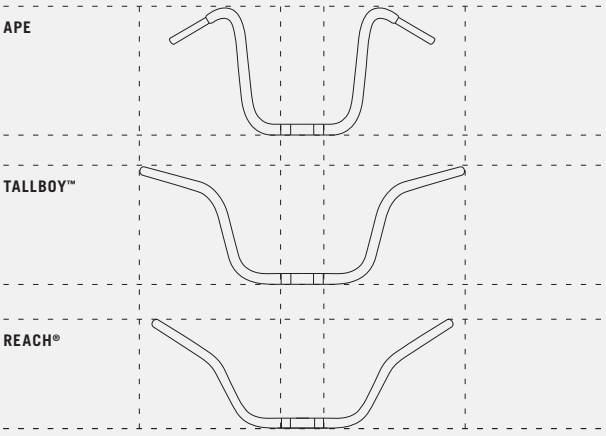
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

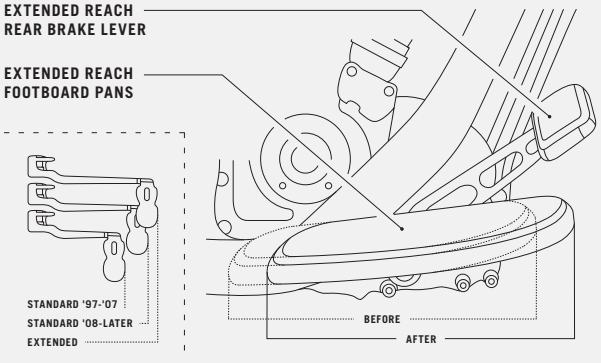
SEE PAGES 306-317



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

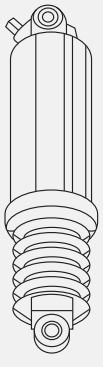
SEE PAGES 416-422



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 354-357



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

SEE PAGES 364-365

ROAD ZEPPELIN® AIR ADJUSTABLE SEATS
The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and hot spots by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tailbone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

A. ROAD ZEPPELIN AIR ADJUSTABLE SEAT
The Road Zeppelin seat's ergonomically friendly design combines a narrow front nose for ease of touching the ground at a stop with a wide seating surface for long-range rider and passenger comfort. The easy-to-clean vinyl seat is finished with an embroidered Road Zeppelin logo that lets everyone see that you take riding comfort seriously. The slotted seat accepts an optional rider backrest or passenger grab rail for additional touring comfort.

Seating – Low Profile

A. BRAWLER® SOLO SEAT

When it's time to go it alone, go in style. These premium quality cowhide leather solo saddles feature a smooth, sleek design that hugs the frame rails for a true custom look. The Brawler® seat's design places the rider "in" the bike for a low-slung riding position, and features a "kick-up" in the rear to hold the rider in place. The seating position is generally lower than stock, but not as far back as Badlander or other low-profile seats. The top-grain leather seating surface and contoured foam padding provide a firm but luxurious feel. Seat does not fit with passenger pillions.

SCREAMIN' EAGLE® PRO STREET TUNER

The Screamin' Eagle® Pro Street Performance Tuner is designed to simplify management of engine operating parameters as performance modifications are made. Once installed, the kit will allow you to adjust key parameters or simply upload the latest Engine Control Module (ECM) calibrations to match your bike's state-of-tune. Start with a high-flow air cleaner and Street Performance mufflers and upload the calibration that provides the best performance mix. Add additional Stage Upgrades later, and you simply upload the proper ECM calibration to match the model and hardware. Plus, you have free online access to the latest factory calibrations.

Ideal for real-world street performance applications, the Pro Street Tuner provides the adjustability to account for bike-to-bike variation and for changes to cams, heads, intake and exhaust while maintaining closed-loop fuel control for fuel economy in the part-throttle operating range. Unlike other aftermarket tuners, the Screamin' Eagle Pro Street Tuner actually talks directly to your motorcycle's ECM and re-programs the motorcycle's operating system. It isn't a piggyback system that tries to fool the ECM into adding more fuel or changing the ignition timing. The Pro Street Tuner plugs into the bike's data port, so no splicing or under-seat hardware is required.

After you upload the proper ECM calibration, dial it in with the Smart Tune function. The guided Smart Tune process walks you through the process to find the right calibration for your build, set the tuner to a data collection mode and then allows you to incorporate the data after the ride with just a few clicks. The ECM calibration is then custom fit for your bike. The module will store up to 15 minutes of run-time data information that can be downloaded to your PC, allowing the rider or technician to view and evaluate the bike's air/fuel ratio, O_2 sensor readings, engine speed and temperature, RPM and vehicle speed, throttle position, spark advance and many more performance characteristics. The Vehicle Communications Module (VCI) will also record and display service codes for troubleshooting and diagnostics. The kit includes the VCI module and unlimited access to the latest software updates and calibrations available from Screamin' Eagle. Tuner Cable kit sold separately.

The Pro Street Tuner software includes impressive features:

- A guided Smart Tune process to enable quick navigation through the software, whether you are new to tuning or an experienced user.
- Smart Tune Live – a dynamic and visual method to track and capture engine data simply by running the vehicle through a range of RPM and throttle positions. This feature reduces the time to modify existing VE (Volumetric Efficiency) tables, which are then analyzed and tuned. Smart Tune Live works on models with factory-installed O_2 sensors only.
- Adjustability to Spark Advance, Throttle Progressivity and Volumetric Efficiency to custom tune the performance combination.
- 50-State U.S. EPA compliant.

The Pro Street Tuner permits tunability to optimize performance and drivability without compromising fuel efficiency, emission levels, engine durability, or 50-State U.S. EPA compliance. And unlike other race tuners or engine controllers, the Screamin' Eagle Pro Street Tuner does not impact your Harley-Davidson® factory warranty coverage.

A. SCREAMIN' EAGLE SMART TUNE PRO AUTOMATIC TUNING MODULE

A. SCREAMIN' EAGLE® SMART TUNE PRO AUTOMATIC TUNING MODULE*

Smart Tune PRO works with the Screamin' Eagle® Pro Street Tuner to automatically adjust your bike for the combination of performance components, climates and vehicle load conditions you are operating in. You just install the upgraded wide-band oxygen sensors in the exhaust headers, download the calibration that the Screamin' Eagle engineers have developed as a starting point, then simply drive down the road and let Smart Tune PRO do the work.

Smart Tune PRO constantly monitors the operating parameters of your motorcycle, and automatically adjusts the bike's Electronic Control Module (ECM) to maximize performance in your current riding conditions. Smart Tune PRO utilizes wide-band O_2 sensors that read oxygen levels in the exhaust stream to determine the optimum air/fuel ratio your bike needs at this very moment. Smart Tune PRO analyzes the data and automatically makes real-time tuning adjustments to the ECM. Unlike the standard narrow-band O_2 sensors that only provide feedback in the part-throttle cruising range, the wideband sensors can read and adjust tuning throughout the part throttle cruising and full-throttle acceleration operating range.

It is fully factory supported, and optimized to maximize performance while maintaining drivability and engine longevity. Smart Tune PRO is 50-State EPA compliant and does not impact the H-D™ factory warranty. Kit includes the Smart Tune PRO module with plug-in wiring harness, two M18 wide-band O_2 sensors and access to free software updates, future calibrations and free online training modules. Screamin' Eagle Pro Street Tuner and model-specific installation hardware is sold separately.

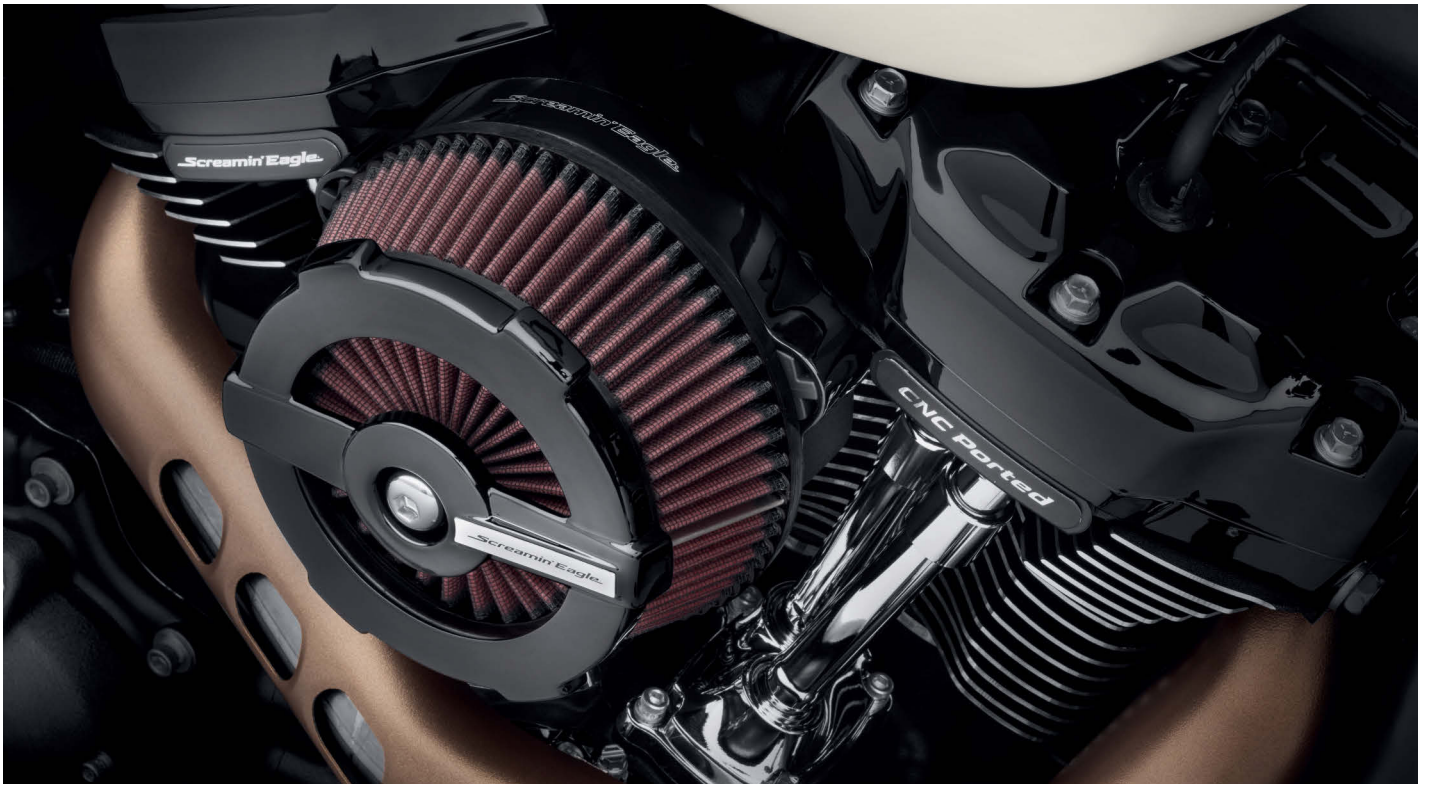
MILWAUKEE-EIGHT® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance. Start with the foundation, the Stage I upgrade, then choose from Stage II, III or IV depending on your performance goals, budget and riding style.



STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States. The street legal and/or street compliant statements may not apply to markets outside of the United States.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to the redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAM, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAM, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

A. SCREAMIN' EAGLE® HEAVY BREATHER EXTREME AIR CLEANER

We've taken the iconic Screamin' Eagle® Heavy Breather Air Cleaner to the next level–an extreme performance level. Designed for maximum performance, this extra-large Screamin' Eagle Heavy Breather Extreme Air Filter flows 42% more air than a traditional Heavy Breather filter. Air moves smoothly through the filter due to an interior bell-shape feature and then travels through a unique round to oval transitioned tube to improve leg clearance while providing unobstructed air to the throttle body. At speeds over 60 mph, the filter captures air from the front, forcing the air through a smaller area to create a RAM air effect, while the long intake tube enhances torque beyond other Ventilator and Round High-Flow Filters for enhanced acceleration. Designed to feed a large displacement engine enough clean air that can support output of over 150hp. The water-resistant filter is washable and rechargeable. The intake tube and back plate are dressed in rich, gloss black or mirror-like chrome and are made from cast aluminum. The back plate features a Screamin' Eagle logo. Kit includes all required mounting hardware. Optional Rain Sock P/N 29400424 is available to protect the exposed element in inclement weather.

Fits '18-later Softail®, '17-later Touring and '17-later Freewheeler® models. Does not fit models equipped with fairing lower glove boxes or fairing lower speakers. All models require ECM calibration with Screamin' Eagle Pro Street Tuner for proper installation. 50-State U.S. EPA compliant.

THE PERFORMANCE

- Riders will experience a performance increase throughout the entire RPM range, with up to a 35% increase in the mid to upper RPM range
- Produces instant passing power without downshifting
- Delivers excellent stoplight to freeway speed and on-ramp acceleration

This kit was developed for the rider looking for a solid seat of the pants increase you can feel – every time you roll on the throttle. The increase in displacement and the bump in compression deliver a significant increase in torque and power over stock while restoring the sensation of riding solo when taking that long trip with a passenger and luggage. The Stage III 107 to 114 upgrade delivers up to 39% more power, and the 114 to 117 upgrade increases power by up to 24% when compared to the Original Equipment engine configurations. The increased compression and cam upgrade will also deliver 17% improvement over a stock CVO117 configuration.

STAGE IV

THE BASICS

- Highest-level performance upgrade available to provide a maximum increase in displacement, compression and flow
- Higher-flowing CNC ported cylinder heads and larger bore throttle body increase the velocity and feed large volumes of air and fuel into the engine, which maximizes power on a larger displacement engine
- Combines ported cylinder heads and larger throttle body in combination with cylinders, matching pistons and proper cam

A. SCREAMIN' EAGLE® MILWAUKEE-EIGHT® ENGINE STAGE IV KIT

This Stage IV Kit was developed to deliver maximum horsepower from the Milwaukee-Eight® engine – all the way to the redline. The system-matched combination of larger displacement cylinders, free-flowing CNC-ported cylinder heads and a cam with the highest available valve lift are the starting point to building the perfect engine for the performance junkie. The addition of the large 64mm bore throttle body and high-flow injectors provides great acceleration from first gear through sixth and exceptional response at the twist of the throttle. Designed for a high level of flexibility, this package is ideal for riders who want stump-pulling torque throughout the rpm range and also crave plenty of arm-pulling acceleration when you whack the throttle. The Stage IV 107 to 114 upgrade delivers up to 52% more power, and the 114 to 117 upgrade increases power by up to 40% when compared to the Original Equipment engine configurations.

- Delivers increased response throughout the entire RPM range
- Provides thrilling acceleration when twisting the throttle
- Maintains flat torque curve from cruising RPM to redline
- Can be installed without removing the engine from the chassis
- Retains Original Equipment Factory Warranty
- 50-State U.S. EPA compliant **Pending approval for use in California on '20 models. Refer to www.H-D.com/shop for status.**

TWIN CAM POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

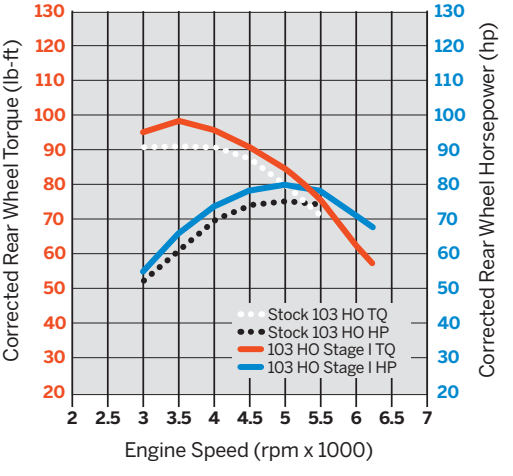
STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on muffles provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Twin Cam 103 HO Stock vs. 103 HO Stage I



STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAMS, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher-compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

B. SCREAMIN' EAGLE® HIGH-FLOW EXHAUST SYSTEM WITH STREET CANNON MUFFLERS

The Screamin' Eagle® High-Flow Exhaust system provides bolt-on performance by reducing the catalyst restrictions and improving exhaust flow. This exhaust system is optimized for use on engines producing 80+ horsepower and works great with Screamin' Eagle Stage Kits. The kit replaces the stock head pipe and mufflers with large diameter, free-flowing head pipes and matching mufflers. The muffler inlet diameter has been increased to 2.25" to enhance exhaust gas scavenging and the catalysts have been relocated to the mufflers to enhance flow. The proof is in the horsepower and torque numbers. Dial the system to your motorcycle by using the Screamin' Eagle Pro Street Tuner to tune your ECM specifically to match your performance upgrades.

The large 4" diameter Street Cannon mufflers are tuned to provide a deep bass exhaust note and a healthy rumble at idle, and that famous Harley sound throughout the RPM range. 50-State U.S. EPA compliant.

Fits '10-'16 Touring models (except CVO™). Does not fit Trike models. Separate purchase of Screamin' Eagle 4" endcaps required. All models require ECM calibration for proper installation.

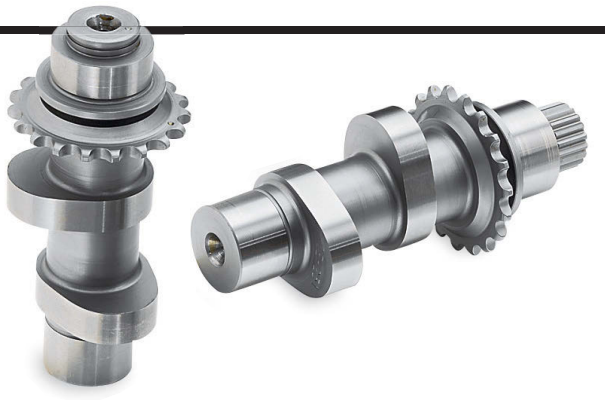
TWIN CAM STAGE II UPGRADE

Camshafts are a fundamental ingredient in the performance recipe, because they control the timing and duration of all major engine events. They are the primary means by which you can tune your engine's horsepower and torque output. Every cam has unique lift and overlap performance characteristics, which means you need to select cams based on exactly the kind of power you're looking for.



A. SCREAMIN EAGLE® TWIN CAM PERFORMANCE CAMS

Kits include front and rear cams. Splined rear cam is included for exceptional load handling capability. Gaskets and bearings not included. Cam Installation Kit P/N 17045-99C (sold separately) includes all required gaskets, bearings and seals for proper installation. Dealer installation is recommended and special tools are required for proper installation.

SE-255 CAM KIT

The ultimate in torque cams, this cam offers substantial increase in low end torque for engines up to 110 cubic inches with compression ratios up to 10 to 1. The low end torque increases are great for heavy bikes or for the person who routinely shifts below 4500 RPM and wants the power available to pass without downshifting. The cam still makes peak power above 5000 RPM so people with lighter bikes will enjoy the torque increases without feeling like the bike runs out of air at higher engine speeds. 50-State U.S. EPA compliant.

25638-07 **$349.95**

For use on '09-'13 Dyna®, Softail®, and '09-'13 Touring and Trike models with 103CI and 110CI engines. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-259E CAM KIT

Developed specifically for big displacement Twin Cam engines, this cam has a modern lobe design that allows for higher valve lifts for a given duration. A high-lift version of the SE-211 camshaft, this cam works great with 103-cubic-inch and larger engines with free-flowing intake and exhaust. It can be used with stock heads (updated with race springs) and high-compression pistons for even more torque than a SE-211 cam or can be coupled with any of the performance heads to realize the full power potential. 50-State U.S. EPA compliant.

25482-10 **$349.95**

For use on '11-'15 103CI and 110CI Touring and Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-585 CAM KIT

This cam is a great match for riders of heavy Touring bikes looking for big torque at the low end. Just a quick downshift to fourth gear results in an effortless pass of that slow-moving tractor-trailer ahead of you. This cam provides an early hit of torque at the low end of the RPM spectrum. A unique combination of lift, cam lobe duration and an enhanced cam profile ramp provides a performance boost you can feel. The cam's QRD (Quiet Ramp Design) delivers high torque throughout the RPM range while reducing valve train noise. 50-State U.S. EPA compliant.

25400117 **$349.95**

For use on '14-'16 Touring models with the use of a 58mm Throttle Body. Also fits '14-'16 CVO™ Touring models with or without the use of a 58mm Throttle Body. Does not fit Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

NOTE: Separate purchase of Cam Drive Retention Kit P/N 25566-06 and Cam Spacer Kit P/N 25928-06 may be required. These kits contain five different spacers to achieve proper sprocket alignment. Individual spacers can be purchased separately.

462 SCREAMIN' EAGLE®

Twin Cam Stage II Upgrade

A. SCREAMIN' EAGLE® BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

A great upgrade for any performance motor. The Billet Cam Support Plate is manufactured from billet aluminum with pressed-in bronze bushings and is pre-assembled with the crankshaft bushing and oil pressure relief valve. Aluminum is specified at 6061 billet plate, heat-treated to T6 specifications with a surface-hardened anodized finish to provide superior strength, rigidity and durability. CNC-precision machining ensures precise dimensions and constant material thickness across the plate, enabling perfect alignment of cams and chains. Cam bushings are made from 660 bronze materials to provide enhanced wear resistance and to stand up to increased loads from the high lift cams common in large displacement motors. The improved Screamin' Eagle® high-flow oil pump provides higher pressure when the oil is hot to keep pressure drops to a minimum and increases the oil supply by 16% and the scavenging by 29% over the '06-'17 Original Equipment oil pump.

25282-11 **$439.95**

Fits '06-'17 Dyna® and '07-'17 Softail®, and '07-'16 Touring and Trike models. Installation requires separate purchase of Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

These Hydraulic Cam Chain Tensioners will significantly outlast the spring-loaded tensioners and are an ideal addition to an engine modified for improved performance. In addition, '02-'06 models utilize a Twin Cam 96 single row front roller chain and sprocket (included in kit). '99-'01 models use Original Equipment front silent chain and sprocket to retain the cam position sensor function. BOLT-ON TWIN-CAM 110 BIG BORE STAGE KITS

HIGH-STRENGTH CYLINDER LINERS ARE MACHINED TO SLIP INTO THE STOCK CASE OPENING

FEATURES

BOLT-ON BIG BORE CYLINDERS

In the past, the only way to increase the bore of your 103- or 110-cubic-inch Twin Cam V-Twin motor was to tear down the motor and re-bore the engine cases to fit larger bore cylinder spigots. It was a labor-intensive and expensive process. The Screamin' Eagle team has engineered a 4" Big Bore Cylinder and Piston package that increase the internal bore from 3-7/8" to 4", without increasing the outside diameter of the cylinder spigot. The cylinder slips into the existing case bore without modification.

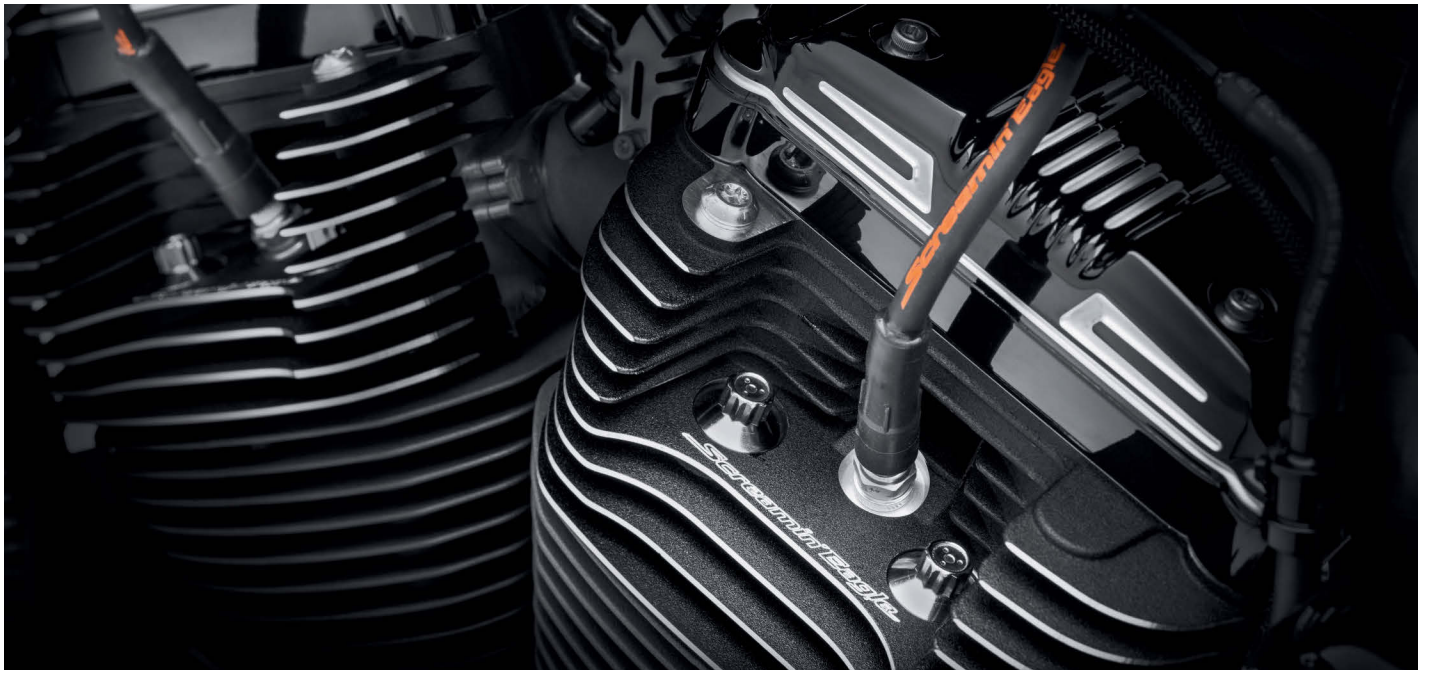
SPORTSTER® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.



STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

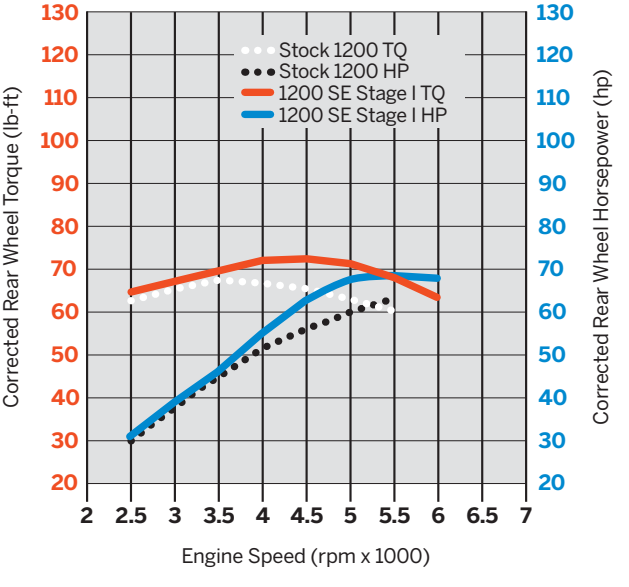
Sportster 1200 Stock vs. 1200 Stage I*



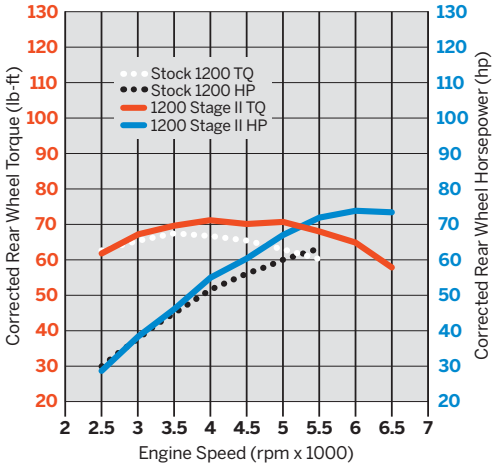
*** 14-later XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers**

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Sportster 1200 Stock vs. 1200 Stage II*



*14-later XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers

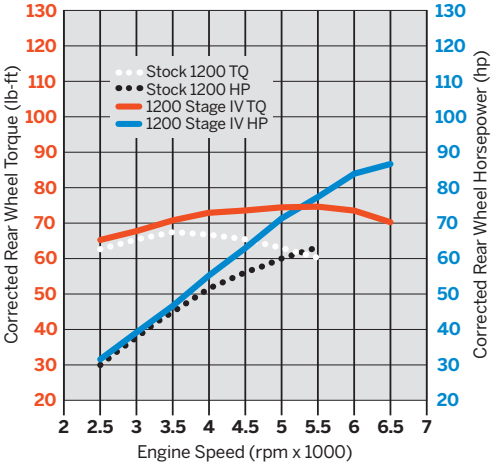
Stage II upgrade requires minor engine disassembly to replace the cam. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, PISTONS, CYLINDER HEADS & THROTTLE BODY

For maximum performance improvement, the addition of high-compression pistons, free-flowing ported cylinder heads and a big bore throttle body top off a performance build. The large-diameter throttle body and port-matched intake manifold deliver huge volumes of fuel and air to the engine, the smooth passages and larger valves easily dump the mixture into the engine and the high compression pistons squeeze the air/fuel into a more volatile vapor. When ignited, the result is a major power increase. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Sportster 1200 Stock vs. 1200 Stage IV*



*1200 Stage IV with High-Flow A/C & Street Cannon Mufflers

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

F. SCREAMIN' EAGLE VARIABLE PRESSURE CLUTCH

Get more performance from the Original Equipment clutch. The Screamin' Eagle® Variable Pressure Clutch is designed to help put the added power from a Screamin' Eagle Stage Kit to the pavement. This bolt-on kit harnesses the centrifugal force of spinning weights to increase the clutch capacity as engine speed increases. The mechanism applies increasing pressure to the stock clutch pressure plate as RPM rises. The result: high torque-handling capabilities without increasing clutch lever effort at idle. The Variable Pressure Clutch also provides smoother clutch disengagement at lower speed. Kit fits behind most stock derby covers with no modifications. See installation manual for additional accessory derby cover fitment information.

To match the performance demands of your engine, team the Variable Pressure Clutch with your choice of clutch diaphragm springs. We recommend the higher-capacity Screamin' Eagle Diaphragm Spring P/N 37951-98 for major performance upgrades.

	Lever Effort	Torque Capacity
Original Equipment Spring	Same as stock	120 ft-lbs
SE Spring P/N 37951-98	35% greater than stock	153 ft-lbs

Complete kit features improved clutch plates for enhanced wear resistance and is the perfect addition when installing a high-output Screamin' Eagle® Stage Kit.

37000026 **$399.95**

Fits '14-'16 Touring and Trike models with hydraulic clutch actuator. Original Equipment on FXDLS, FLSS, FLSTBS and FXSE models.

Fits '91-later XL and '94-'97 Evolution 1340-equipped models.

E. SCREAMIN' EAGLE PERFORMANCE SLIPPER CLUTCH FOR VRSC™ MODELS

This clutch offers reduced lever effort and improved performance. The unique "slip and assist" ramp system opens the two halves of the clutch hub slightly during high loads to the drivetrain, allowing a moderate slip that reduces shock to the drivetrain during rapid downshifting. The resulting reduction in wheel hop allows maximum contact between the tire and the road in wet or slippery conditions. Clutch lever effort is also reduced by 20% in 1130cc and 30% on 1250cc applications.

37938-08KA **$239.95**

Fits '02-'07 VRSC™ models.

F. SCREAMIN' EAGLE 6-SPEED TRANSMISSION AND GEAR SET (SHOWN WITH SCREAMIN' EAGLE TRANSMISSION SIDE COVER FOR 6-SPEED TRANSMISSION)

F. SCREAMIN' EAGLE® 6-SPEED GEAR SET

Designed from the ground up, the Screamin' Eagle® transmission incorporates many of the best Original Equipment features, like a late-style shifting mechanism and a newly designed "shift ring" system to make this the smoothest shifting Harley-Davidson® transmission available. The "shift ring" system is similar to the system used in the VRSC™ transmission and it slides on the shafts to mate into the gears. This eliminates sliding heavy gears to accomplish the shift and results in smooth, precise and light-effort shifting. Sixth gear is a true overdrive at a .89:1 ratio and the first five gears mimic today's proven 5-speed ratios. The overdrive feature allows you to run a lower engine RPM in sixth gear, at any given road speed. Lower RPM can result in lower vibration, longer engine life and smoother cruising. The Screamin' Eagle 6-Speed Transmission is available as a complete transmission or as a replacement gear set and can be matched with hydraulic or cable-operated clutch controls.

Screamin' Eagle 6-Speed Transmissions feature forged chrome "trap door," forged shifter forks and forged and precisely ground gears. No speedometer or exhaust mount modifications are required. Complete transmissions are ready to install into the chassis and the 6-Speed Gear Set Kits are designed to replace the stock gear set without removing the transmission. Gear Set Kits require slight modification (template included) to the Original Equipment transmission case and include all necessary installation hardware.

HARLEY-DAVIDSON® LONGBLOCK PROGRAM

Your engine is the heart and soul of your Harley-Davidson® motorcycle. When the miles start to add up, a Harley-Davidson LongBlock can put the rumble back in your ride simply, quickly and affordably.

WHY SHOULD I CONSIDER A LONGBLOCK? Unlike an engine rebuild from the repair shop down the street, the Harley-Davidson® LongBlock is manufactured from 100% new Original Equipment components, and is built to the latest factory specifications. Engine includes upgraded Screamin' Eagle® lefty crankcase bearing, Screamin' Eagle cam bearings and Screamin' Eagle performance tappets to handle higher-stress loads and performance upgrades. In addition, '99-'06 LongBlocks are upgraded with late-model hydraulic cam tensioners, high-volume oil pump and billet cam plate. '07-'16 103CI and 110CI engines feature factory-installed Automatic Compression Releases.

WHAT DOES THE H-D® LONGBLOCK INCLUDE? The crankcase is pre-assembled with flywheels, connecting rods, bearings, seals, cylinders, pistons, rings, heads, valves, valve springs, tappets and pushrod covers. Also included and ready for Dealer installation are top end rocker arm supports, rocker arms and shafts, pushrods and breathers. The LongBlock also includes cam support plate, cam plate bearings, cam and timing chain drive, hydraulic tensioners and all required gaskets and new hardware.

ARE UPGRADES AVAILABLE?* You can choose silver or black-highlighted engines to match your styling direction. Bikes originally equipped with Twin Cam 88® engines can upgrade to 95 or 103CI displacement, and Twin Cam 96™-equipped models can be repowered with 103 or 110CI engines, based on specific model fitment. Upgrades require model-specific ECM recalibration (sold separately). Only available in North America.

WHAT ELSE DO I NEED? LongBlock is sold without cam shafts, lower rocker boxes, upper rocker box covers or cam cover. You have the option to reinstall your current cams and covers, or select from a wide assortment of performance and custom engine cover options.

FAST AND EASY: Just take your Harley® motorcycle to your authorized dealership. They will remove the engine from the frame, ship the left crankcase half to Harley-Davidson and in a short time, you will have a new LongBlock back, ready for the dealer to reinstall in your bike. Your engine retains its original vehicle identification number (VIN) for easy title exchange and registration.

**Displacement upgrades are available for vehicles previously equipped with street compliant big bore kits only.*

Also available:

A. BRASS COLLECTION

The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, handcrafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

BRASS COLLECTION
The authentic alternative to the typical chrome-covered or blacked-out look, the Harley-Davidson® Brass Collection delivers a warm, handcrafted look to your custom ride. These minimalistic living finish components make a garage-built styling statement and are the ideal addition to your stripped-down bobber or café motorcycle. Artistically manufactured from solid brass, these components feature a natural antique finish that will age and patina when exposed to the elements. Unlike bright polished and plated brass trim, these heritage-finished components are subtle additions to your ride and don't compete for attention with the rest of the bike. Brass Collection components are factory treated with wax to slow the aging process, and are shipped with cleaning and care instructions.

HEATED HAND GRIPS
Keep comfortable on those cool mornings or frigid night rides. Warm hands have a major impact on overall body comfort and sometimes gloves just aren't enough. The glueless grip design allows grip removal if you change handlebars or motorcycles.

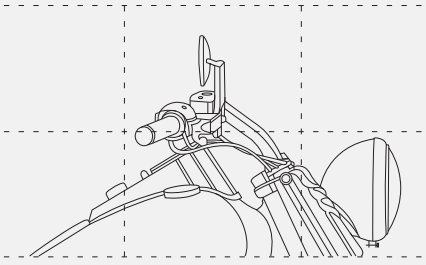
COMFORT, STYLE OR BOTH?

Every person is unique. Your overall height, arm reach, upper body length and riding style all dictate your relationship to the bike's controls. Add in the desire for a unique, custom look and your handlebar options multiply exponentially.*

REACH® HANDLEBARS
Recommended for shorter riders, Reach® Handlebars are shaped to position the hand controls closer to the rider for optimized elbow and wrist position.

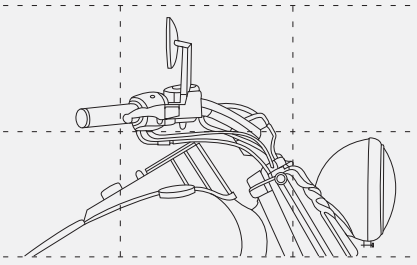
TALLBOY® HANDLEBARS
Recommended for taller riders, Tallboy® handlebars enable long-armed riders to more comfortably fit and maneuver the motorcycle.

YOUR RIDING POSITION



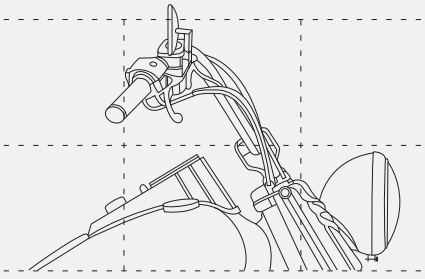
DRAG HANDLEBAR*

Narrow, flat and more aggressive, drag bars provide a straight elbow and neutral hand and wrist position. For maximum comfort, drag bars can be positioned with curved or straight risers to minimize stretch to the controls.



BEACH HANDLEBAR*

Low and wide, a beach bar spreads your arms and gives you room to breathe. Ideal for the rider with long arms, beach bars can be a little too wide for many riders. While selecting a bar, make sure you can reach the hand controls when the handlebar is fully turned.



APE & TALLBOY HANDLEBAR*

Tall and wide, ape and Tallboy® handlebars provide a classic "fists-in-the-wind" look and can add long-haul comfort for riders with long arms. Because handlebar height is regulated in many areas, check local laws before installing a tall handlebar.

CHIZELED HANDLEBAR*

For cutting edge style, a Chizeled Bar combines the hands-up feel of a mini-ape with the narrow width of a drag bar. The bar's shoulder-width design keeps the elbows in and the arms straight ahead, and the wrist and hands fall in a neutral palms-down grip.

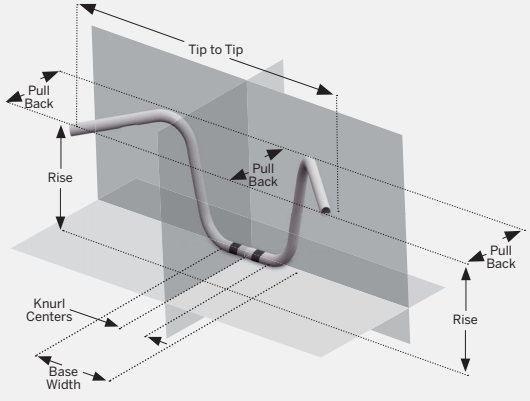
CHOOSING YOUR HANDLEBAR

RISE is the vertical distance between a handlebar's tip and its base.
Adding risers to bars that sit too low can help put hand grips into your sweet spot.

PULL BACK is the distance the handlebar tips come back toward the rider.
Greater pull back can eliminate the long reach to the bar for a shorter rider.

WIDTH is measured from tip to tip. Make sure the bar isn't too wide so it pulls your hands off the grips when turning.

KNURL CENTER is the distance between the center line of the bar's knurling.
The measurement should match the riser dimension to maximize clamping pressure.



*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake lines for some models. Handlebar height is regulated in many locations. Check local laws to ensure your motorcycle meets applicable regulations.
**1.25" Fat Bar base necks down to fit 1.0" handlebar clamp.

Handlebars – Dyna®/Softail®

A. EXTREME REACH® HANDLEBAR*

Extensively tested with a panel of riders between 5'-0" to 5'-5" tall, this Extreme Reach® Handlebar and recommended riser combination was proven to be the most ergonomically pleasing handlebar for many Dyna® and Softail® models. Shaped to provide the ideal balance of pull back and width, this handlebar produces an overall pull back of 11.0" and a tip-to-tip width of 30.0" when combined with Curved Riser Kit P/N 56266-09 (sold separately). Your hands fall naturally in place and the narrow width reduces your stretch while making low-speed turns and parking lot maneuvers.

55800563 **$69.95**

Fits '06-'17 Dyna (except '14-'17 FXDL) and '00-'17 Softail models (except FLSS, FLSTFBS, FXCW, FXCWC, FXS, FXSB, FXSTD and Springer™). Does not fit CVO™ models. All models require separate purchase of additional installation components.

See your Dealer for cables, lines and additional installation components required, or visit www.H-D.com/store and search part number 55800563.

B. REACH HANDLEBAR* – 1.0"

Recommended for riders between 5'-2" and 5'-8" tall, this Reach Handlebar is shaped to position the hand controls closer to the rider for optimized elbow and wrist position. Designed to provide the ideal balance of pull back and width, this handlebar allows your hands fall naturally in place. The narrower width reduces your stretch while making low-speed turns and parking lot maneuvers, and the overall effect is improved confidence and long-range comfort for short-armed riders.

Fits '18-later FLDE, FLHC, FLHCS, FLSL, FXBB and FXLR models. All models require separate purchase of additional installation components.

CHOOSE YOUR BATWING HANDLEBAR

Just about every model of Harley-Davidson® motorcycle features a different stock handlebar. Selected to complement the style or use of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

Choosing a bar for your batwing fairing-equipped model is about more than just style – it's about how you approach the road. Where the bar positions your hands, wrists and arms directly affects how you feel on your motorcycle. For every set of bars, there are three factors at work: rise, pull back and width. These three measurements determine your reach to the hand controls and, therefore, your overall feeling of comfort and control.

A. ELECTRA GLIDE® CHROME HANDLEBAR*

Replace your stock polished bar with this 1.0", chrome handlebar that allows you to tuck the wires inside the bar for a clean, finished look. Identical shape to the Original Equipment Electra Glide and Street Glide bar, this high-quality chrome-plated handlebar is designed to be compatible for use with TGS-equipped Electra Glide® models.

56036-08 Chrome. **$154.95**

Fits '09-later Electra Glide and Street Glide® models (except FLHXS and CVO™ models). Does not fit Trike models. All models require separate purchase of additional components.

B. BATWING REACH® HANDLEBAR*

The Batwing Reach® Handlebar is shaped to provide all-day riding comfort for smaller-stature riders. Extensively tested by a panel of riders who stand 5'-1" to 5'-5" tall, the Reach Handlebar was ergonomically designed to provide the ideal combination of shoulder position, elbow bend and wrist angle. HANDLEBAR RISERS

You may think you are perfectly happy with the way your bike is adjusted. But that doesn't mean that it is correctly set up for you. We get used to our bikes — our muscles become trained and we end up accommodating the bike. It is far better to take the time to make the bike accommodate you. If you are satisfied with your handlebar's width and wrist position, but wish it was just a little higher, lower or closer to you, your dealer can recommend a set of handlebar risers that move the bar into your comfort zone.

ADJUSTING YOUR HAND POSITION

STOCK HANDLEBAR

Just about every model of Harley-Davidson® motorcycle comes with a different stock handlebar. Selected to complement the style of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

STOCK HANDLEBAR WITH RISERS

If the stock handlebar has the correct width and hand position for you, but seems just a little too far away, we offer riser kits that bring the controls within reach. Straight and curved risers are available for many model and handlebar combinations.

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume without distortion. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine grade, Class D, 4-channel, 75-watt RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. STAGE II BOOM!™ AUDIO SYSTEMS

Boom!™ Audio Stage II systems give you the very best motorcycle sound experience. Stage II systems are based on a bi-amplified, three-way speaker design. Each Stage II speaker features a separate woofer, midrange and tweeter element that allow frequencies to be delivered with the optimum driver design. Each speaker is powered by two channels from the amplifier — one for the woofer, and the second for the midrange/tweeter combination — for a total output of 150 watts/speaker. This doubling of the power allows you to play your music louder with far less distortion than traditional systems.

Boom!™ Audio – Stage II

BOOM!™ AUDIO STAGE II COMPONENTS*

Headline your own concert tour. Big and bold is the best way to describe the musical performance you will experience when listening to your favorite band through a Boom!™ Audio Stage II sound system. The weather-proof bi-amplified, three-way, 150-watt per channel speakers feature high-excursion woofers and separate mid- and high-frequency drivers. An industry-leading driver design utilizing premium materials to deliver increased accuracy, durability, and responsiveness. Powered by a dedicated 300-watt RMS amplifier, each pair of speakers is capable of producing "filling-rattling" volume. Designed to work seamlessly with the factory installed Boom! Audio infotainment head unit, the Boom! Stage II components are system matched and feature custom-tuned static and dynamic equalization that dial in the ideal setup for your ride. And you can choose how far you want to go. From a single pair of fairing-mounted speakers and a 300-watt amp to a full bore 8-speaker, 4-amp, 1200-watt system, we've got you covered.

A. BOOM! AUDIO AMPLIFIER KIT

Take your music to the streets. Boom! Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction and reduced clipping. Unlike aftermarket amplifiers that connect between the radio and the speakers, the Boom! Audio amplifier bypasses the radio's internal power amp to produce the cleanest sound possible. The Boom! Audio Amplifier boosts the pure source signal, minimizing any distortion generated through the speaker output. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The marine-grade, Class D, 4-channel, 75-watts RMS/channel amplifier (300-watt RMS total) has been designed from the ground-up for the harsh motorcycle environment. Fairing-Mounted kit includes all mounting hardware and wiring harness. Note: The use of the Boom! Audio Amplifier turns off the radio's internal amplifier.

A. BOOM!™ AUDIO AMPLIFIER KITS

Take your music to the streets. Boom!™ Audio Amplifier Kits allow you to crank up the volume with significantly less distortion. The amplifier provides more power than Original Equipment radio alone, resulting in increased volume, fuller sound reproduction, reduced clipping and lower Total Harmonic Distortion (THD) than head unit alone. When teamed with Boom! Audio Speakers, the Boom! Amplifier provides 50% louder (6dB) system output than other popular aftermarket systems at the same volume setting. The system-matched high-output signal features optimized sound equalization for crisp, clear vocals and maximum bass response and the strong midrange response cuts through wind and road noise. The amplifier features 40-watt/channel (160-watt total) output. Kit includes all mounting hardware.

A. WIRELESS HEADSET INTERFACE MODULE

It's time to cut the cord with your bike. Now available for '14-later Touring and Trike models equipped with Boom!™ Audio 6.5GT and GTS Radios, this Wireless Headset Interface Module (WHIM) lets you communicate with your bike without being wired to it. The WHIM Bluetooth® adapter permits wireless connectivity to the 6.5GT infotainment system, allowing you to communicate via CB radio, hear turn-by-turn GPS directions, listen to your favorite radio stations and so much more all through your Bluetooth-enabled headset.

Bluetooth® Wireless Technology
Wireless interface permits full access to the Infotainment features without the hassle of being connected to the bike. You have full freedom of movement for turning your head and getting off the bike at fuel stops.

Integrated Into the 6.5GT and GTS Radio
Seamlessly use all wired headset functionality (CB, Phone, Intercom, Navigation, Radio) without the compromises of aftermarket systems, and configure your Boom! Audio 20S headset directly from the radio controls.

Superior Audio Quality
Harley-Davidson® headsets feature proprietary software that delivers superior audio quality with stereo output compared to non-Harley® headsets, which provide a mono sound output.

Dual Headset Connectivity
Two Bluetooth-enabled headsets can be connected to one WHIM, simplifying installation and keeping costs in line.

Integrated Behind the Fairing
Module mounts behind the fairing and connects directly to the radio, eliminating external wires and connections to console and Tour-Pak® communication ports.

Compatible with H-D® Wireless Headsets
Current H-D® wireless headsets are completely compatible. No need to purchase new headsets to use the WHIM system. Harley headset volume can be adjusted from the motorcycle hand controls.

Impact of Retrofit on Wired Microphone Functionality
Upon installation of the WHIM, your motorcycle's wired microphone functionality will no longer be available. However, wired audio will continue to function as before.

A. ELECTRA GLO™ ILLUMINATED FAIRING ACCENT TRIM
Sweeping trim dresses the Electra Glide® Batwing Fairing for a distinctive, yet functional look. The wiring is concealed inside the fairing for a clean, custom appearance. Complete kit includes mounting template and all necessary installation hardware. Trim may cover pinstripes or two-tone paint lines on some vehicles. Check appearance prior to installation.

Fits '14-later Electra Glide®, Street Glide®, Ultra Limited, and Tri Glide® models. Fitment on vehicles with two-tone paint, pinstriped, or CVO™ models is not recommended due to the potential for the accent lights to overlap pinstripes or paint lines.

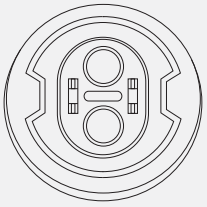
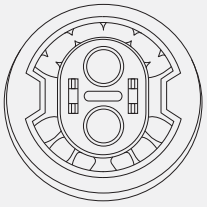
Daymaker® LED Projector Headlamps were developed to provide light where you need it most. With a combination of superior nighttime performance and modern signature styling, these brilliant LED headlamps push out a bright-white beam that lights up the surroundings and draws the attention of oncoming traffic. The long-life, solid-state LED headlamps are housed in sealed shock and vibration-resistant lamp assemblies that mount into the existing light housing. Installation is simple, and the plug-in headlamps require no rewiring.



7" DAYMAKER PROJECTOR LED HEADLAMP

Offering best-in-class punch of light, these headlamps illuminate the road in front of you, yet are directed slightly downward to avoid blinding oncoming drivers, making them perfect for highway riding situations.

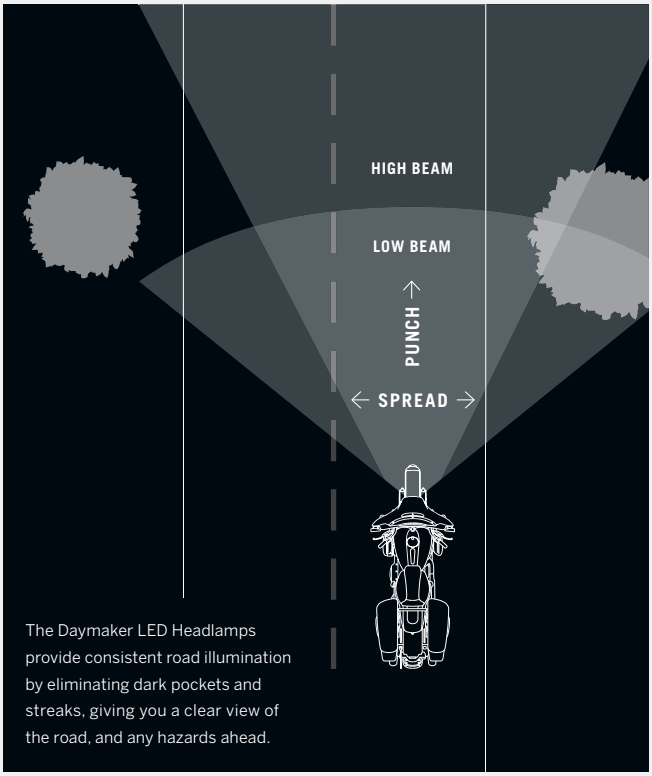
- Extensive engineering and testing to ensure the road in front of you is equally lit
- No dark spots or streaks in light illumination
- Plug and play headlamps can be installed easily



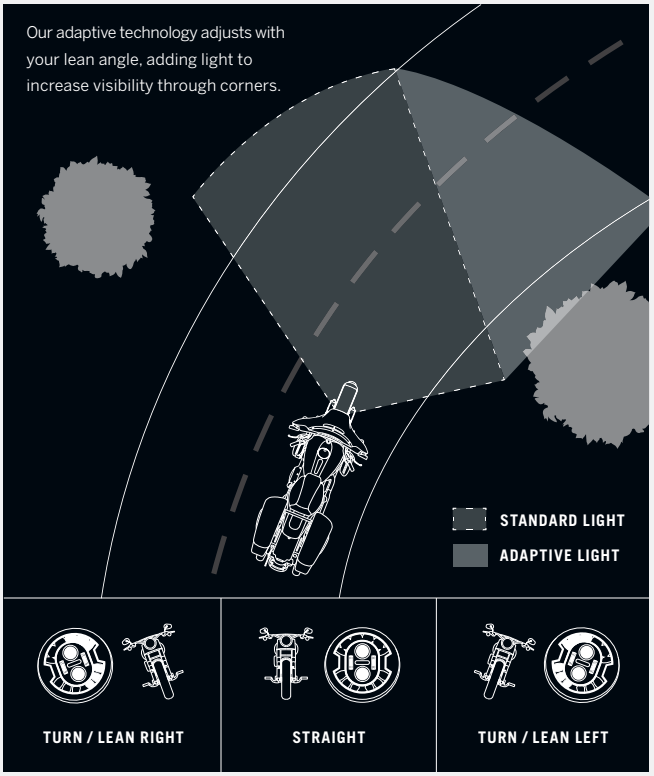
7" DAYMAKER ADAPTIVE LED HEADLAMP

Delivering the right amount of usable light exactly where you need it most – you will see ditch to ditch, and down the road with lean angle controlled bank lighting for improved line of sight through corners.

- Includes all features and benefits of the 7" Daymaker Projector LED Headlamp
- Automatically projects light into corners to illuminate areas of previously unlit road
- Patented sensors and electronics determine lean angle of the motorcycle
- Adaptive technology works in both low beam and high beam



The Daymaker LED Headlamps provide consistent road illumination by eliminating dark pockets and streaks, giving you a clear view of the road, and any hazards ahead.



LUMENS VS LUX

Lumen is a unit of light, while Lux is a unit of light measurement where the area is also taken into account. The number of Lumens is not the only factor when choosing a headlamp, but also the usable light, or Lux. The Daymaker LED Headlamps have been perfected to utilize both Lumens and Lux, giving you the best visibility of the road.

WHEELS

Make a definitive style statement. Whether you're going for an old-school or new-school look, this is where you set the tone. You'll ride comfortably knowing that Harley-Davidson® wheels meet the highest standards of performance and durability.

STRENGTH & STYLE

From a visual perspective, the wheels, sprocket and brake rotors make up almost half of the motorcycle's profile, and they set the styling direction for the whole bike. Choose wisely. Harley-Davidson® forged and cast wheels undergo thousands of hours of real-world testing to meet the highest standards of performance and durability.

THE TRANSFORMATION

It's amazing how far two wheels can take you when it comes to individual style. From classic Laced to the commanding Annihilator, you can always find the perfect pair to round out a bike that could only belong to you.

WHEEL FINISH OPTIONS

SELECT A FINISH TO MATCH YOUR STYLE

MIRROR CHROME

Looking for the ultimate flash? Choose Mirror Chrome wheels. To achieve this rich look, our dedicated team of polishers spends hours preparing the wheel for its finish. All visible wheel surfaces are micro-polished to a glass-smooth finish, and special masking is applied to prevent contamination to threads and bearing bores.

GLOSS BLACK

Want a sinister look? Choose Gloss Black. First, we polish all the surfaces. Then we apply the rich coating for a finish with incredible depth and shimmer. The all-black spoke and rim blend with the tire sidewall to deliver a massive profile on a blacked-out bike, but the deep gloss surface holds its own in the company of chrome.

CONTRAST CHROME

Can't make up your mind? Choose Contrast Chrome wheels. We start with a hand-polished wheel, and add a proprietary finish that features both gloss black paint and chrome highlights. The combination produces a stunning contrast that lightens the wheel's profile by visually thinning the spokes, rim and hub.

BRONZE

Desire a look fit for a king? Choose Bronze wheels. First, we start by polishing all surfaces. Then we apply the unique bronze powder coating for a finish that provides a high element of contrast. Styled to match the bronze finish found on the Dominion™ Engine Trim and Controls Collection, bronze is sure to set you apart from the crowd.

GRAPHITE

Want to break away from tradition? Choose Graphite wheels. To create the ultimate in anti-chrome defiance, we start with a hand polished wheel and then add a graphite powder coating that gives the wheel plenty of aggressiveness and attitude in a muted finish. Never blend in again.

WHEEL ORDERING PROCESS

STEP ONE

Select a wheel part number for your specific fitment.

STEP TWO

Select the wheel installation kit for your specific application (model, year, and front or rear).

Note: If your model is not specified in the wheel fitment, a wheel installation kit will not make the wheel fit your model.

STEP THREE

Refer to the instruction sheet included in your wheel kit to determine the necessary parts required from the installation kit.

STEP FOUR

Use only Harley-Davidson specified tires. See a Harley-Davidson® dealer. Using non-specified tires can adversely affect stability, handling or braking, which could result in death or serious injury.

COLOR SHOP

The bike is a blank canvas, a surface ready to express your personality with design, color and texture. Harley-Davidson® Color Shop paint and color-matched components set the tone for the rest of the accessories and set your bike apart from the crowd.

COLOR SHOP LIMITED SERIES – MAYHEM

Riding motorcycles is a way to overcome the mayhem that ensues in our daily lives. The feeling of riding a motorcycle is something that cannot be explained through words; it has to be experienced for one to truly understand. Sometimes you ride to push the limits of the machine until everything outside of that moment fades away. The Mayhem limited paint set embodies the feeling of speeding away from the everyday noise, through its Inferno Red Pearl and Phantom Black base, Ghost White with Brushed Silver Highlights that accelerate from the front to the back of the bike, and the performance-inspired #1 logo set within the Deep Charcoal on the saddlebags. Limited availability – with just 150 serialized sets offered worldwide. Each set comes with a certificate of authenticity. Sets ship December 2019.

COLOR-MATCHED SPLITSTREAM VENT TRIM AND ROAD GLIDE® HEADLAMP TRIM

COLOR-MATCHED SPLITSTREAM VENT TRIM – BATWING FAIRING

The batwing fairing is a key visual and functional element of your Touring bike, and the Splitstream vent sits front and center for all to see. Shaped to replace the Original Equipment satin black soft trim, this one-piece rigid component blends into the sweep of the outer fairing and dresses the vent in style. Available in your choice of finishes, this vent trim is the perfect complement to available windshield trim kits.

Fits '14-later Electra Glide®, Street Glide®, Ultra Limited and Tri Glide® models with batwing fairing.

*NOTE: This product is a Paint to Order accessory.
Please allow for an average of 5 weeks' delivery for this item.

COLOR-MATCHED ROAD GLIDE® HEADLAMP TRIM

This sleek one-piece headlamp surround adds a clean custom look to the nose of the Road Glide® model. The easy-to-install Headlamp Trim hugs the dual headlamps and covers the matte black factory bezel for a menacing aerodynamic appearance. The swept back look and the knife-edge side strakes emphasize the streamlined shape of the fairing without impeding airflow to the vents or obstructing headlamp light patterns. Available in your choice of finish, the self-adhesive Headlamp Trim can be installed without removing the headlamp or fairing.

Fits '15-later Road Glide models.

COLOR-MATCHED CUSTOM STRETCHED SIDE COVERS AND VENTED FAIRING LOWERS

COLOR-MATCHED VENTED FAIRING LOWER KIT*

These Fairing Lowers feature a venting system that allows you to adjust the amount of air that circulates across the engine. The ratcheting friction lock pivot allows you to easily set the position. NOTE: Fairing Lower Kits are painted in a single color and do not feature pinstriping.

Fits '14-later Air-Cooled Touring and Trike models. Does not fit Twin-Cooled™ models or '18-later FLTRXSE. Freewheeler® models require separate purchase of Engine Guard P/N 49184-09A or 49050-09A and Bracket P/N 45700054. Does not fit with Mustache Engine Guards, Chopped Engine Guards or Knockout Wheel Kit P/N 43300494 or 43300496.

COLOR-MATCHED CUSTOM STRETCHED SIDE COVERS

These Stretched Side Covers are sculpted to smooth the visual transition from the side of the bike to the front of the saddlebag, and trade the traditional stepped look for a rearward flowing design. The one-piece covers are a snap-in replacement for the Original Equipment covers, and require no bonding or modification for installation.

Fits '14-later Touring models. Does not fit with Auxiliary Power Port P/N 69201099.

BODYGUARD IN A BOTTLE

Oil is the lifeblood of your engine. It not only lubricates the moving parts, but also cools, cleans and flushes away all the byproducts of combustion. It lives in an environment filled with heat, friction and toxins that are determined to break it down and shorten its useful life. And it keeps the heart of your motorcycle beating at idle or at full throttle. Harley-Davidson's complete line of lubricants are formulated specifically to keep your motorcycle running strong, mile after mile.

ENGINE OIL FAQ

What's in a bottle of oil?

- The Base Stock makes up 75-80% of a bottle of oil. Generally, if it comes from the ground, it is a Mineral Oil. And if it is made in a lab or a reactor, it is Synthetic Oil.
- The Additive Pack makes up the remaining 20-25%. These are the ingredients that make oil smarter and tailored to it's application. The additives include:
  - Viscosity Modifiers – lets oil flow like 20 weight oil at start-up and 50 weight oil at operating temperatures
  - Detergents – cleans inside your engine
  - Dispersants – suspends contaminants in the oil so they can be carried to the filter
  - Buffers – neutralizes acids that form in your engine
  - Anti-oxidants – prevents sludge and oil thickening oxidation
  - Corrosion inhibitors – protects internal components from corroding
  - Anti-wear additives – provides protection against internal wear

How often should I change my motorcycle engine oil?

You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants during this time period.

What viscosity grade should I use in my Harley Motorcycle?

The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson® Motor Oil. The SAE 50 H-D® Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What's the difference between synthetic and petroleum-based lubricants?

Group I, II and III petroleum-based lubricants are derived from oil pumped from the ground. Group IV and V synthetic lubricants are chemically produced in a lab. Petroleum-based lubricants inherit physical components (including contaminants) of the source crude oil in the refining process, while synthetic lubricants are custom-formulated to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

What's better in my bike – Petroleum or Synthetic?

Petroleum lubricants have been around for a long time, and are effective at lubricating in most conditions, but mineral oil can't compete with the purity of synthetic lubricants – especially in extreme conditions. Synthetic oil does a better job reducing wear and resisting breakdown under a wider range of operating temperatures.

What does SYN3® full Synthetic Motorcycle Lubricant do for my drivetrain?

SYN3® Full Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson 360 Motorcycle Oil, and:

- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

What makes Harley SYN3 better than other Synthetics for my Harley?

SYN3 is pure, genuine, full synthetic lubricant.

- SYN3 base stocks are synthesized materials – including Poly Alfa Olefin (PAO) and Esther, which are the most pure, highest quality synthetic base stocks available
- SYN3 has the smartest, most robust additive package developed specifically to provide maximum performance and protection in H-D powertrains

Beware, not all synthetics are created equal.

- Due to a legal loophole, other brands are selling "Highly Refined Group III" mineral oil as synthetic oil
- Head to head, SYN3 outperforms these oils

SYN3 is a product you can trust, from a brand you can trust. Oil is the lifeblood to your Harley-Davidson; don't take chances with anything else.

Why should I use H-D® oil in my Harley?

- No one tests as much as we do – we test on the road, on dynos and in the laboratory
- We accumulate millions of testing miles on our engines and drive trains, using only H-D Oil
- We test in the harshest environments – testing is performed in the extreme heat of the desert
- We test under the most rigorous duty cycles – accelerated durability testing helps explore the limits of our designs, in less time. This is a worst case scenario for oil
- We run thousands of hours on dynos
- We test in the laboratory – sampling and analyzing oil to determine its life and effectiveness during use

H-D's additive package is the best available, it's the most robust, it was created exclusively for H-D powertrains and we are the only ones who have it.

A. HEAVY SYNTHETIC GEAR OIL

TESTED-CERTIFIED for use in Harley-Davidson® transmission and primary chaincase applications. Exclusively engineered for Harley-Davidson motorcycles, this Heavy Synthetic Gear Oil is intended for use in extreme temperature environments (desert heat or cold weather), frequent two-up riding and heavy load riding applications. This dual viscosity (SAE 80W-140), heavy weight gear and primary oil was developed with proprietary additives and pure synthetic base stock so it flows better at cold start-up then in high temperatures viscosity behaves like a 140 weight oil to provide maximum protection. Formulated to maintain the proper coefficient of friction for clutch operation and to provide superior lubrication for the primary chain drive. This Gear Oil was formulated to provide specialized lubricity for the anti-wear requirements of transmission gears across a wider temperature range than mineral based oil. This Heavy Synthetic Gear Oil is approved by Harley-Davidson for use in all stages of transmission and primary chaincase life. This is not for use in the crankcase as a motor oil.

Formulated for use in all H-D® Transmissions and the following primary chaincase applications: '71-later XL, '83-'84 XR1000, '08-'13 XR, and '84-later Big Twin models with wet-type diaphragm spring clutch. Not for use in '02-'17 VRSC™ or '15-later XG models.

H. REMOTE CONTROL GARAGE DOOR OPENER KIT

Operate your automatic garage door opener without leaving your motorcycle seat or fumbling in your pocket for the remote control. Compatible with most brands of automatic openers, this kit allows you to operate your door by cycling the bike's high-beam switch. The hidden transmitter splices into your bike's wiring harness and is powered by your vehicle battery, so there are no transmitter batteries to replace. When your key is switched off the transmitter is disabled, providing added garage security if you park your bike outside. The signal is sent to the in-garage receiver that plugs into a standard 110-volt outlet and is wired to the automatic opener. The receiver's rolling code technology provides additional security. Kit includes one transmitter and one receiver. Individual components are available to equip additional motorcycles and garages.

E. LITHIUM LiFe BATTERY

Want a reliable, long-lasting motorcycle battery with powerful cranking amps? Now you can have all that along with a massive reduction in battery weight. The Harley-Davidson® Lithium LiFe Batteries offer more than 2 times longer battery life and more cranking amps than standard AGM batteries. Compared to AGM batteries, the Lithium LiFe batteries weigh an impressive 17.6 lbs less on Touring models, 12.2 lbs less on Softail®, Dyna®, and V-Rod® models and, 8.8 lbs less on Sportster® and Street™ models. The Lithium LiFe battery has a very slow self-discharge rate during storage and, when properly disconnected, they are maintenance free for 12 months. The LiFe battery uses an impressive 85% of amp hour capacity compared to only 10% for an AGM battery, which provides power to your accessories such as audio and lighting. The LiFe battery features high-quality machined brass terminals for an uncompromised connection and an on-board tester that allows you to instantly see your battery's power level. Touring and Softail LiFe batteries come with a caddy that ensures perfect fitment into the battery compartment; foam blocks are not required. For optimal charging, use the Harley-Davidson Dual Mode Battery Tender, sold separately.

Spark Plugs

A. SCREAMIN' EAGLE® PERFORMANCE SPARK PLUGS

Screamin' Eagle® Spark Plugs feature double platinum coating for superior erosion resistance and extended life. The "V" trimmed ground electrode reduces shrouding of the flame front to promote flame propagation, and the fine wire center electrode enhances startups and ignitability. Screamin' Eagle Plugs feature Ribbed Core Technology (RCT) that provides resistance to fouling, and are designed with Original Equipment-style noise suppression to prevent electrical interference with radios and CB communication equipment. Works great in racing applications where rich air/fuel conditions are required. Unique style with Screamin' Eagle logo. Sold in pairs.

Tire Accessories

A. MOTORCYCLE TIRE PRESSURE MONITORING SYSTEM

Proper tire pressure is critical to the operation of your motorcycle. The Harley-Davidson® Tire Pressure Monitoring System (TPMS) takes the hassle out of monitoring your vehicle's front and rear tire pressure manually. The TPMS alerts the rider to low tire pressure as soon as the vehicle is started. While riding, receive low-pressure alerts via your H-D™ Speedo/Tach or via the H-D Connect™ mobile app.

42300124 **$199.95**

Fits '20-later Touring models (except Japan) equipped with Original Equipment or Accessory wheels that accept a TPMS sensor.

B. TIRE PRESSURE GAUGE AND FILL VALVE

Simplify checking the air pressure level and filling the tires on your motorcycle. This Tire Pressure Gauge features an 18" flexible hose and 2-way air chuck with both a 45° fill port and a unique side fill port that provides easy straight-in access to hard-to-reach motorcycle valve stems. The dual-range instant-read gauge measures pressures from 0-60 psi and 0-400 kPa, and is protected from impact and abrasion by a thick rubber collar. Designed to fit an air compressor with a standard 1/4" quick-disconnect coupler, this gauge allows you to check the pressure and fill the tire without removing the chuck from the tire. Just apply the chuck to the valve stem, read the pressure and add air by depressing the comfortable trigger lever. And for checking tire pressure on the road, you can use this tool like any standard tire gauge.

12700096A **$79.95**

C. COMPACT AIR COMPRESSOR WITH LIGHT

Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump and filling the tire is a chore that many of us ignore. The Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11" air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension and nylon carrying bag.

D. VALVE STEM EXTENSION

Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

42300009 **$10.95**

E. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR

Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32" (0-14/32") and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

75137-98B **$41.95**

F. DIGITAL TIRE PRESSURE GAUGE

Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12" braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10 **$41.95**

G. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH

Chrome-plated steel gauge housing with Harley-Davidson script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. Calibrated for 10-50 psi and 0-32/32" tread depth readings. Rotate the indicator shaft 90 degrees in the housing for 70-345 kPa and 0-30mm tread depth readings. Complete with a Bar & Shield logo embossed leather pouch.

ONE-YEAR OVER-THE-COUNTER PARTS AND ACCESSORIES WARRANTY

Harley-Davidson warrants that street legal Genuine Motor Parts ("Parts") and street legal Genuine Motor Accessories ("Accessories") that are purchased on or after January 1, 2012 through an authorized dealer will be free from factory defects, under normal use and service, for a period of one year starting from the date of retail sale and delivery (not date of installation). Because this limited warranty covers only Parts and Accessories, labor is not covered. This limited parts warranty does not cover defects or damage due to abuse, misuse or improper installation. This parts warranty applies to Parts and Accessories you or an aftermarket shop have installed, but only for defects in manufacturing — not conditions caused by the improper installation.

This Parts and Accessories warranty is separate and distinct from the limited factory warranty that applies to your stock motorcycle. This Parts and Accessories warranty does not extend or modify the factory warranty that applies to your motorcycle. It only covers the street legal Genuine Motor Parts and street legal Genuine Motor Accessories added to your motorcycle.

This Parts and Accessories warranty does not cover defects, damage or premature wear to your motorcycle that are caused by the installation or use of Parts and Accessories, even those installed by an authorized dealership. Examples include, but are not limited to performance-enhancing powertrain components or software, exhaust systems, non-approved tires, lowering kits, handlebars, add-ons connected to the factory electrical system, etc.

The fact that Parts or Accessories are labeled or branded Harley-Davidson, or are sold or installed by an authorized dealership, does not necessarily make them appropriate or warranted for the make and model of your motorcycle. The use of Parts and Accessories not designed and tested for your motorcycle may have negative consequences on the performance of your motorcycle and may create conditions not covered by the limited factory warranty.

The remedy for breach of this limited Parts and Accessories warranty is expressly limited to the repair or replacement of any component that proves to be defective, and does not extend or create liability for consequential damages, costs or expenses, including loss of time, inconvenience, or loss of use of the motorcycle. Any implied warranty, including warranty of merchantability or fitness for a particular purpose, is expressly limited to the duration of this limited one-year Parts and Accessories warranty, or to the shortest duration permitted by the laws in your state.

EXCLUDED COMPONENTS:
All Genuine Motor Parts & Accessories will qualify for the one-year over-the-counter warranty, with the following exceptions:

- Tires
- Chemicals
- Premium Luggage (two years)
- Audio and Navigation (two years where applicable)
- Non-street legal components (including Screamin' Eagle® Pro)
- Anything with a manufacturer/factory warranty
- Other disposable and consumable items

To obtain warranty service, return the affected component(s) with proof of purchase, at your expense, within the limited warranty period to an authorized Harley-Davidson® dealer.
